Question I

30 Minutes

X Co. is owned 100% by A, an individual. X has assets with a gross value of \$1,200 and an adjusted basis of \$900. X has liabilities of \$200 and earnings and profits of \$300. A's basis for his X stock is \$700.

P Co. is a publicly held corporation whose stock is listed on a national exchange. S Co. is a wholly owned subsidiary of P. P's basis for its stock in S is \$100.

The following transaction took place on 1/2/72:

In a transaction which qualifies as a "statutory merger" under applicable local law, S acquires all the assets of X (and assumes all its liabilities) in exchange for \$900 worth of its voting stock and \$100 of P's nonvoting stock in the transaction.

- (a) Does the above qualify as a reorganization? Explain in detail.
- (b) Suppose the acquisition was for \$1,000 of P's voting stock and the assumption by P of X Co.'s liability.

Question II

60 Minutes

A and B each own 50% of the stock of X Company. A's basis for his stock is \$800 and B's basis is \$1200. X Co. is engaged in two lines of business (and has been so engaged for the last 5 years unless the facts specify otherwise): the manufacture and sale of electronic equipment (Electro); and the manufacture and sale of air conditioners (Airco). Assume further that: the assets of each division have a fair market value of \$1000; the assets of each division have an adjusted tax basis of \$500; separate records have been kept for each business; all assets are readily allocable to the respective businesses; no liabilities exist; and there are accumulated earnings of \$1000.

P Corporation desires to "acquire" the Airco business, but not the Electro business. On January 2, 1972, the following transactions occur:

X transfers the Electro assets to Y Co. for all of its stock and distributes the Y stock equally to A and B; shortly thereafter (and as a part of a prearranged plan), P. Co. acquires the X stock from A and B solely for P voting stock. Immediately after acquiring the stock, P. Co. liquidated the X. Co.

What are the tax consequences to A, B, and P Co.?

Question III

60 Minutes

X Co. is a closely held corporation with 100 shares of common stock outstanding, owned 50 shares by A (basis \$200), 30 by B (basis \$400), and 20 by C (basis \$150). X has the following assets:

	<u>Basis</u>	<u>Value</u>
Nonoperating Assets	\$200	\$300
Operating Assets	<u>700</u>	<u>900</u>
Total	\$900	\$1200

X has outstanding liabilities of \$200 (in the form of 20-year debenture bonds), and accumulated earnings of \$400. P Company is a publicly held corporation (whose stock is listed on the New York Stock Exchange).

What are the principal tax consequences to X, A, B, and P from the following transaction:

On 1/2/72, X transferred all its assets to P for \$40 of "short-term" notes, assumption of X's \$200 of liabilities and P voting stock worth \$960. X liquidates and transfers to: A-40 short-term notes, B-stock worth \$300, C-stock worth \$200, and P-stock worth \$460.

Question IV

30 Minutes

In the various alternative transactions considered below, the following general facts may be assumed: S Co. is a bona fide operating company, having assets with a basis of \$700 and a value of \$1000 (no liabilities); P Co. is a publicly held operating corporation, whose stock is listed on a national exchange; A is an individual.

- (1) P owns 70% of S (which stock was acquired 10 years earlier for \$20) and A owns 30% of S (basis \$10).
 - (a) Pursuant to a plan of reorganization, S transfers all its assets to P solely in exchange for voting stock of P; shortly thereafter, and as part of the plan, S liquidates, distributing 70% of its assets to P and 30% to A (which assets consisted solely of P stock). What results to A, S and P?
 - (b) Suppose instead that S merges into P pursuant to state law?
