PROVOCATION MANSLAUGHTER AS PARTIAL JUSTIFICATION AND PARTIAL EXCUSE

MITCHELL N. BERMAN* & IAN P. FARRELL**

ABSTRACT

The partial defense of provocation provides that a person who kills in the heat of passion brought on by legally adequate provocation is guilty of manslaughter rather than murder. The defense traces back to the twelfth century and exists today, in some form, in almost every U.S. state and other common law jurisdictions. But long history and wide application have not produced agreement on the rationale for the doctrine. To the contrary, the search for a coherent and satisfying rationale remains among the main occupations of criminal law theorists.

The dominant scholarly view holds that provocation is best explained and defended as a partial excuse on the grounds that the killer's inflamed emotional state so compromised his ability to

** Assistant Professor, Denver University Sturm College of Law. For extremely helpful comments on earlier drafts, we are grateful to Andrew Ashworth, Peter Cane, John Deigh, Joshua Dressler, David Enoch, Stephen Garvey, Doug Husak, Larry Sager, David Sosa, Kevin Toh, and Mariah Zeisberg, as well as participants in presentations of this Article at the University of Texas School of Law, Denver University Sturm College of Law, Penn State University School of Law, and Wayne State University School of Law. We also thank Guha Krishnamurthi for excellent research assistance.

conform his conduct to the demands of reason and law as to render him substantially less blameworthy for his conduct. In contrast, a small minority of scholars have maintained, without significant argumentative support, that provocation is best understood as a partial justification on the ground that the provoked killing is less wrongful than is an unprovoked killing, ceteris paribus. Recently, other commentators have argued that provocation mitigation is neither partial excuse nor partial justification.

Against all of these familiar positions, we argue that partial excuse and partial justification are necessary and sufficient conditions for provocation manslaughter. In our view, an intentional killing deserves to be punished and labeled as manslaughter rather than murder only when, because of provocation, this particular killing is significantly less wrongful than the standard intentional killing and when, because of the actor's partial lack of control, he is less blameworthy for committing an act that remains all-things-considered wrongful. In elaborating and defending our account, we rebut the oft-repeated but rarely challenged propositions that justification and excuse, even in partial forms, are mutually exclusive, and that the very notion of partial justification is incoherent. We also draw forth implications for how the sentencing ranges for murder and manslaughter should be related.

INTRODUCTION

The partial defense of provocation provides that a person who kills another in the heat of passion brought on by legally adequate provocation is guilty of manslaughter rather than murder. The doctrine has both deep roots and widespread limbs: the influence of provocation on the common law of homicide has been traced back to the twelfth century, and some version of the provocation defense is part of the law in almost every U.S. state and other common law jurisdictions.¹ But long history and wide application have not translated into agreement on the rationale for the doctrine.

The search for a rationale for the provocation defense has resulted in a scholarly debate lasting several decades but yet to bear satisfactory fruit. The provocation debate is a scion of a broader discussion concerning the character of defenses that has consumed a generation of criminal law theorists. Defenses are generally classified as either justifications or excuses. While the precise nature of the distinction is disputed, justification defenses are generally said to apply when the actor's conduct is not wrongful, whereas excuse defenses are said to apply when the actor engages in wrongful conduct but is not liable, particularly because the actor is not blameworthy.² Self-defense is usually considered a paradigmatic justification defense, and insanity a paradigmatic excuse defense. Roughly speaking, a person who kills in self-defense has done

1. The majority of U.S. states retain the common law doctrine of provocation. *See infra* note 41 and accompanying text. A substantial minority have replaced common law provocation with a partial defense based on the Model Penal Code's analogue of killings resulting from "extreme mental or emotional disturbance." MODEL PENAL CODE § 210.3(1)(b) (1962); *infra* note 64. The relationship between the partial defense at common law and under the Model Penal Code is discussed in Part I. In several states, such as Illinois and Texas, provocation results in a lower category of murder rather than manslaughter. *See* 720 ILL. COMP. STAT. ANN. 5/9-2 (West 2010) (defining provocation as second-degree murder); TEX. PENAL CODE ANN. § 19.02(d) (Vernon 2009) (defining provocation as a felony of the second degree).

2. This brief statement of the distinction is, of course, unrefined. For example, to say that conduct is not criminally wrong does not entail that it involves no moral wrong. *See* Mitchell N. Berman, *Justification and Excuse, Law and Morality*, 53 DUKE L.J. 1, 4 (2003) [hereinafter Berman, *Justification and Excuse*]; Douglas N. Husak, *Partial Defenses*, 11 CAN. J.L. & JURISPRUDENCE 167, 170 (1998) [hereinafter Husak, *Partial Defenses*]. We will address this distinction in greater detail in the body of the Article.

something of which the law does not disapprove, whereas an insane killer is considered not responsible for her actions and therefore not properly blamed or punished for them.

Provocation differs from self-defense and insanity in several ways, and as a result has proven particularly obdurate to classification. First, a successful plea of provocation does not preclude conviction for the killing. Rather, the offense is reduced from murder to manslaughter, with the available punishment options reduced accordingly. While self-defense and insanity are complete defenses, provocation is a partial defense. The debate about provocation's rationale has therefore focused upon whether provocation is a *partial justification* or a *partial excuse*. By analogy, partial justifications would apply when an actor's conduct was *less wrongful* than if justifying conditions were not present, but the conduct was still, on balance, wrongful. Partial excuses would apply when the actor was *less blameworthy* than if excusing conditions were not present, but the actor was still blameworthy enough to be liable for some punishment.

Second, some elements of the doctrine—such as the requirement of “adequate” provocation—suggest that provocation should be treated as a partial justification. Other elements—notably the need for “heat of passion”—point toward a rationale of partial excuse. Like European zoologists confronted with the warm-blooded but egg-laying platypus for the first time, criminal scholars have struggled to produce a coherent rationale that adequately captures those features of the provocation doctrine that seem to pull in opposite directions.

Scholars have responded in several ways. The dominant contemporary view is that provocation is best understood as some version of partial excuse.³ A small minority of scholars has claimed to the contrary that provocation manslaughter is, or should be, some kind of partial justification.⁴ Yet another group of commentators dissents from both of these positions, claiming that provocation is neither a partial justification nor a partial excuse.⁵ These scholars argue that the justification/excuse framework is an inapposite mechanism for

3. See *infra* Part II.B.1.

4. See *infra* Part II.B.2.

5. See *infra* Part II.B.4.

making sense of provocation. All these scholars share a common resistance to the obvious possibility that the rationale for provocation is grounded in *both* partial excuse and partial justification. The near-consensus opinion is that a partial defense cannot be coherently grounded in both partial justification and partial excuse.⁶ Although the doctrine of provocation is acknowledged to exhibit the *appearance* of both justificatory and excusatory characteristics,⁷ most scholars treat this as the puzzle to be resolved, not the key to understanding the doctrine's rationale.⁸ The apparently dual nature of provocation is usually considered an unfortunate artifact of the common law's ad hoc development, a sign of confused thinking by

6. A notable exception to this rule is Andrew Ashworth, who has argued that a combination of partial excuse and partial justification provides the normative basis of English provocation law and describes its key features. A.J. Ashworth, *The Doctrine of Provocation*, 35 CAMBRIDGE L.J. 292, 307 (1976). We could find no other wholehearted advocacy for such a position apart from that of the Law Reform Commission of Ireland. Law Reform Comm'n of Ir., Consultation Paper on Homicide: The Plea of Provocation, ¶ 7.31, at 141, LRC CP 27-2003 (Oct. 2003) [hereinafter Consultation Paper on Homicide], available at http://www.lawreform.ie/_fileupload/consultation%20papers/cpProvocation.pdf. We address these views in Part II.B.2, in which we argue that, Ashworth and the Law Reform Commission of Ireland notwithstanding, no one has advanced a compelling theoretical framework for a combined account of provocation or provided refutations of the main criticisms of such combined accounts.

7. See, e.g., Vera Bergelson, *Victims and Perpetrators: An Argument for Comparative Liability in Criminal Law*, 8 BUFF. CRIM. L. REV. 385, 418 (2005) ("In sum, the partial defense of provocation includes *elements* of both excusatory and justificatory rationales.") (emphasis added); Samuel H. Pillsbury, *Misunderstanding Provocation*, 43 U. MICH. J.L. REFORM 143, 149 (2009) ("[P]rovocation has both justification and excuse dimensions."); Robert Mison, Comment, *Homophobia in Manslaughter: The Homosexual Advance as Insufficient Provocation*, 80 CAL. L. REV. 133, 146 (1992) (suggesting that "[t]he common-law categories of sufficient provocation are best explained by this 'provocation as justification' analysis," but the "concept of excuse provides [a] second possible rationale").

8. See, e.g., J.L. Austin, *A Plea for Excuses*, 57 PROC. ARISTOTELIAN SOC'Y 1 (1956-57), reprinted in *THE PHILOSOPHY OF ACTION* 19, 20 (Alan White ed., 1968) ("[W]hen we plead, say, provocation, there is genuine uncertainty or ambiguity as to what we mean—is he partly responsible, because he roused a violent impulse or passion in me, so that it wasn't truly or merely me acting 'of my own accord' (excuse)? Or is it rather that, he having done me such injury, I was entitled to retaliate (justification)?"); Reid Griffith Fontaine, *Adequate (Non)Provocation and Heat of Passion as Excuse Not Justification*, 43 U. MICH. J.L. REFORM 27, 33 (2009) ("American common law has been inconsistent in its treatment of the doctrine as one of justification or excuse."); see also Marcia Baron, *Killing in the Heat of Passion*, in *SETTING THE MORAL COMPASS: ESSAYS BY WOMEN PHILOSOPHERS* 353, 357 (Cheshire Calhoun ed., 2004) ("[A] closer look at [provocation] reveals that it is not purely an excuse; it is, somewhat confusedly, partly a justification.").

judges and legislatures⁹ and evidence of the need to abolish or amend the defense.¹⁰

Even the small handful of scholars who have demonstrated appreciation for provocation's justificatory dimension as well as its excusatory dimension nonetheless do not frame their positions as a combination of partial justification and partial excuse.¹¹ Instead, the orthodox view remains that the act of killing in provocation is partially excused but *not* partially justified. Two rationales are routinely provided in support of this position: the oft-repeated but rarely challenged proposition that justification and excuse are mutually exclusive, and that proposition's regular stablemate, the claim that partial justification is incoherent.

We think the orthodox view is wrong. A coherent and cohesive rationale for provocation can be crafted from the dual bases of partial excuse and partial justification. Put simply, partial excuse and partial justification are necessary and sufficient conditions for provocation manslaughter. Neither partial excuse alone, nor partial justification alone, provides sufficient mitigation for an intentional, wrongful killing to be treated as manslaughter rather than murder. An intentional killing deserves to be treated as manslaughter rather than murder—and deserves to be punished accordingly—only when both justifying and excusing conditions apply.

We argue that such a rationale is preferable to existing theories of provocation along both descriptive and normative dimensions. The rationale we propose not only makes more sense of the contours of the doctrine, but also appropriately distinguishes those intentional killings that deserve to be treated as manslaughter from those that deserve to be treated as murder. Indeed, we argue that

9. Joshua Dressler, *Provocation: Partial Justification or Partial Excuse?*, 51 MOD. L. REV. 467, 480 (1988) [hereinafter Dressler, *Provocation*] ("Confusion surrounds the provocation defense.... It is likely that some of the confusion surrounding the defense is inherent to the situation, but it is also probably true that English and American courts were insufficiently concerned about the justification-excuse distinctions while the law developed.")

10. Baron, *supra* note 8, at 358 ("That the heat of passion is not purely a partial excuse or purely a partial justification suggests that the defense needs to be abandoned or modified, or at least reconceptualized.")

11. See, e.g., Timothy Macklem & John Gardner, *Provocation and Pluralism*, 64 MOD. L. REV. 815, 819 (2001); Victoria Nourse, *Passion's Progress: Modern Law Reform and the Provocation Defense*, 106 YALE L.J. 1331, 1394-95 (1997); Andrew von Hirsch & Nils Jareborg, *Provocation and Culpability*, in RESPONSIBILITY, CHARACTER, AND THE EMOTIONS 241, 253 (Ferdinand Schoeman ed., 1987).

many of the problems associated with the modern application of the provocation doctrine¹²—and especially those associated with its Model Penal Code reformulation—result from a failure to fully appreciate the need for partially justifying conditions in provocation cases.

This Article proceeds in four parts. Part I presents an overview of the provocation manslaughter doctrine. Part II critically assesses accounts or theories of provocation advanced thus far in the scholarly literature. Part III briefly introduces our competing account according to which mitigation from murder to manslaughter is warranted only when the actor is both partially justified and partially excused. Part IV adds further flesh to that skeletal presentation in the context of anticipating and rebutting possible objections.

I. THE DOCTRINE OF PROVOCATION

A. *Historical Development*

While the influence of provocation on English homicide law can be traced back to decisions of twelfth-century judges and juries,¹³ the doctrine of provocation began to take a form recognizable to modern scholars during the seventeenth century.¹⁴ Two requirements for a killing to be treated as manslaughter due to provocation rather than murder crystallized during this period. First, the killing

12. See, e.g., Nourse, *supra* note 11, at 1332 (criticizing application of the passion defense to numerous cases of intimate homicide in which the victim merely indicated a desire “to leave a miserable relationship”); Susan Rozelle, *Controlling Passion: Adultery and the Provocation Defense*, 37 RUTGERS L.J. 197, 197 (2005) (arguing that “we should not permit adultery to mitigate murder to voluntary manslaughter”); Laurie Taylor, *Provoked Reason in Men and Women: Heat-of-Passion Manslaughter and Imperfect Self-Defense*, 33 UCLA L. REV. 1679, 1679 (1986) (claiming that “the legal standards that define adequate provocation and passionate ‘human’ weaknesses reflect a male view of understandable homicidal violence,” making it difficult for women to secure manslaughter verdicts); Mison, *supra* note 7, at 133 (arguing that the “homosexual-advance defense is a misguided application of provocation theory”).

13. See generally JEREMY HORDER, *PROVOCATION AND RESPONSIBILITY* 1-22 (1992). This Section draws heavily on Horder’s thorough and lucid investigation of the evolution of provocation in English law.

14. *Id.* at 23.

must have occurred while the killer was “in the heat of blood.”¹⁵ A killing in cold-blooded revenge, even if in response to provocation, was murder.¹⁶ Second, the heat of blood must have been brought about by provocation that was *adequate*, that is, sufficiently grave.¹⁷ The law came to recognize four distinct—and exhaustive—categories of provocative conduct considered “sufficiently grave to warrant the reduction from murder to manslaughter of a hot-blooded intentional killing.”¹⁸ The categories were: (1) a grossly insulting assault; (2) witnessing an attack upon a friend or relative; (3) seeing an Englishman unlawfully deprived of his liberty; and (4) witnessing one’s wife in the act of adultery.¹⁹

Jeremy Horder argues that, at their inception, both the heat of passion requirement and the categories of adequate provocation reflected the “touchy, quixotic concern for honour”²⁰ that was prevalent in early modern England. According to this social code, disdainful or contemptuous conduct was considered an “affront,” an intentional attempt to undermine a man’s (presumptively virtuous) reputation.²¹ To protect his honor, a man had to retaliate: he had to respond physically and with anger.²² Only a passionate and physical response demonstrated that the affronted man possessed the Aristotelian virtues of courage and “spirit.”²³ But such virtues were, by definition, the mean between extremes. The retaliation, although passionate, had to be proportionate to the gravity of the affront.²⁴

The four categories of adequate provocation captured circumstances that were considered affronts serious enough to warrant a violent response, but not serious enough to warrant a lethal response, in order to reestablish an honorable reputation.²⁵ A man who killed in response to provocation falling within one of the four categories “departed from the mean in point of retributive justice by

inflicting excessive retaliation, although, given the gravity of the provocation, it [was] not greatly excessive.”²⁶ As the killer’s actions were an overreaction—but not a gross overreaction—manslaughter rather than murder was the appropriate offense. If the provocation was so extreme that killing in anger was considered an appropriate response, no criminal liability was imposed.²⁷ On the other hand, if the provocation was less grave than that which the four categories of adequate provocation covered, killing in anger was grossly excessive and therefore considered murder.²⁸

According to Horder then, the early provocation doctrine was centered on partial *justification*. A gravely affronted man was justified in responding physically and angrily. A proportionate response was fully justified, but an excessive response was only partially justified. Seen through the lens of honor, anger or outrage was an integral component of the (fully controlled) righteous response of the wronged man.²⁹ Both the heat of blood requirement and the adequate provocation requirement were grounded in partial justification. Crucially, in this early period of the provocation doctrine’s development, judges and commentators made no mention of loss of self-control.³⁰ There was no suggestion that the wronged man had lost control, and therefore no inference that he was not responsible for his conduct. In short, notions of excuse did not play a role in deeming a provoked killing to be manslaughter.

During the eighteenth and nineteenth centuries, however, “a new conception of anger”³¹ gained ascendancy. Anger and other emotions were seen as capable of interfering with, even overwhelming, reason. Sufficient anger was therefore understood to cause a loss of self-control.³² As one commentator of the time put it, great anger “rendereth the man deaf to the voice of reason.”³³ This loss of self-

26. *Id.*

27. “Honour theorists” asserted a right “to administer proportional requital personally, precisely because they felt that the law offered no or no adequate means of redress for what men of honour took to be serious affronts against honour.” *Id.* at 50.

control, this inability to conform one's actions to the dictates of reason, became the basis for *partially excusing* those who killed in the heat of blood. The categories of adequate provocation were retained. For a time they were important for "evidentiary reasons":³⁴ such grave provocation gave rise to a legal presumption "that the defendant was in fact carried to revenge by the irresistible impulse of ungovernable passion."³⁵ Those who killed as a result of conduct that did not fall within the four categories of adequate provocation were presumed not to have lost their capacity for self-control. The cause of the killing was therefore traced to the defendant's malignant design.³⁶

This presumption was, of course, a legal fiction.³⁷ It was possible that a person (of particularly bad temper, say) could show that he genuinely lost self-control as a result of minor provocation—that is, provocative conduct not captured by the four categories. The courts and commentators acknowledged this fiction, and the importance of adequate provocation morphed once more. Lack of adequate provocation was taken not as evidence that the defendant *could not* have lost self-control, but rather that the defendant *ought not* have lost self-control, or "*ought not* to have vented it to the extent [he] did in the circumstances."³⁸ Underlying the categories of provocation, as Andrew Ashworth puts it, "was more than a hint that people *ought not* to yield to certain types of provocation, and that if they did the law should offer no concession to them."³⁹ The strict categories of adequate provocation were gradually softened, and eventually the categorical approach was replaced by a standard of reasonableness. Rather than being restricted to a predetermined set of situations, adequate provocation was determined by reference to whether, in the relevant circumstances, any reasonable person would have been so subject to passion as to temporarily lose control.⁴⁰

39. Ashworth, *supra* note 6, at 295.

40. HORDER, *supra* note 13, at 99. The reasonable person standard has found its way into statutes and case law in England and many U.S. states. *See, e.g.*, 720 ILL. COMP. STAT. ANN. 5/9-2(b) (West 2010) (stating provocation must be "sufficient to excite an intense passion in a reasonable person"); Homicide Act, 1957, 5 & 6 Eliz. 2, c. 11, § 3 (Eng.); *R v. Duffy*, (1949)

B. The Current Doctrine of Provocation

The majority of U.S. jurisdictions retain a version of the common law defense of provocation.⁴¹ In these states, the criminal codes have incorporated, explicitly or implicitly, the principles developed by common law.⁴² The doctrine has not, however, developed identically in the jurisdictions that retain the common law defense.⁴³ The states differ, for example, as to whether mere words⁴⁴ or wrongs done to a third party⁴⁵ may amount to adequate provocation, and as to whether a time delay between the provoking act and the killing, which was long enough to allow a reasonable man time to cool off, precludes the defense.⁴⁶ As a result of these divergences, scholars commonly announce that “[p]rovocation enjoys no canonical definition.”⁴⁷ These differences notwithstanding, it is possible to identify key features of the provocation doctrine that are common to all the jurisdictions that retain the common law defense. Our goal in this Article is to present a rationale that explains these central, common features of the provocation doctrine. We do not attempt to provide a rationale that explains doctrinal rules that some, but not all, common law jurisdictions have accepted. Indeed, to the extent that our theory cannot explain particular rules, that failure is a reason, albeit not necessarily a decisive reason, to abandon these rules. We are not claiming, then, that any particular jurisdiction has gotten the details of provocation doctrine exactly right. Rather, we claim

1 Eng. Rep. 932, 932 (Crim. App.) (“Provocation is some act, or series of acts, done by the dead man to the accused which would cause in any reasonable person, and actually causes in the accused, a sudden and temporary loss of self-control, rendering the accused so subject to passion as to make him or her for the moment not master of his mind.”). See generally WAYNE R. LAFAVE, CRIMINAL LAW 777 (4th ed. 2003). Some controversy surrounds whether the relevant standard is—or should be—a reasonable person or *the* reasonable person; a reasonable *man* or a reasonable *person*; and whether the emotion, loss of control, or the actual killing or violence has to be reasonable. See, e.g., *id.* at 777; Nourse, *supra* note 11, at 1402-03; *infra* note 61 and accompanying text.

41. See Joshua Dressler, *Rethinking Heat of Passion: A Defense in Search of a Rationale*, 73 J. CRIM. L. & CRIMINOLOGY 421, 443 (1982) [hereinafter Dressler, *Rethinking Heat of Passion*].

42. For a description of the different textual devices for defining provocation employed in the state codes, see *id.* at 430-31.

43. *Id.*

44. See, e.g., LAFAVE, *supra* note 40, at 780-81; Nourse, *supra* note 11, at 1341-42.

46. See, e.g., *id.* at 786-87.

47. Stephen P. Garvey, *Passion's Puzzle*, 90 IOWA L. REV. 1677, 1691 (2005).

that our theory provides a normatively attractive rationale that makes sense of the most important features of common law provocation. By providing a rationale for the broad contours of common law provocation, even if not for all of the doctrine's jurisdiction-specific minutiae, we have resolved a puzzle that has so far eluded criminal law theorists.

Eleven states have subjected the common law defense of provocation to significant statutory reform.⁴⁸ The legislatures in these jurisdictions have enacted statutes that include language mirroring the "extreme mental or emotional disturbance" (EMED) provision of the Model Penal Code.⁴⁹ The resulting defense is broader than its common law cousin,⁵⁰ and the differences between the two defenses make it at least debatable whether they share a common rationale.

1. *The Common Law*

In states that retain the common law defense of provocation, an intentional killing that would otherwise be murder is reduced to manslaughter if, at the time of the killing, the defendant was subject to heat of passion caused by adequate provocation.⁵¹ From this statement of the doctrine, which accords with that given by most commentators, we can isolate four features of the provocation defense:

- (1) The actor must have killed while in the *heat of passion*.
- (2) The heat of passion must have been brought about by *adequate provocation*.
- (3) Provocation is a *partial defense*. The defense reduces the offense from murder to manslaughter. Provocation does not exonerate a defendant, but neither is it merely a mitigating factor considered in determining the appropriate sentence.

48. See *infra* note 64.

49. MODEL PENAL CODE § 210.3(1)(b) (1962); see also *infra* Part I.B.2 (discussing the Model Penal Code's EMED formulation).

50. See, e.g., PAUL ROBINSON, CRIMINAL LAW 711-12 (1997).

51. See, e.g., LAFAVE, *supra* note 40, at 775 ("Voluntary manslaughter ... consists of an intentional homicide [in which] the defendant, when he killed the victim, was in a state of passion engendered in him by an adequate provocation.").

- (4) Provocation is available as a partial defense only to murder. It is not a defense, partial or otherwise, to other offenses.⁵²

The first two features—heat of passion and adequate provocation—are the requirements of the doctrine that a defendant must establish in order for the defense to apply. The third feature—the partial nature of the defense—describes the legal effect of the doctrine, whereas the fourth feature is a limitation on the doctrine’s scope.

This statement of the doctrine’s key features differs from those some commentators provide. In most cases, the differences are merely of expression, rather than substantive disagreement. For example, Wayne LaFave states that there are four obstacles, rather than two, that a defendant must overcome in order to establish the defense:

- (1) There must have been a reasonable provocation.
- (2) The defendant must have been in fact provoked.
- (3) A reasonable person so provoked would not have cooled off in the interval of time between the provocation and the delivery of the fatal blow.
- (4) The defendant must not in fact have cooled off during the interval.⁵³

LaFave’s first two obstacles, however, are simply other ways of stating what we call the *adequate provocation* and *heat of passion* requirements. LaFave uses adequate provocation and reasonable provocation interchangeably,⁵⁴ and a defendant whom was “in fact provoked” is one in whom the provocation in fact caused the heat of passion.⁵⁵ LaFave’s third obstacle is best understood as an aspect of

52. A small number of jurisdictions allow a provocation-style defense for offenses other than murder, but to our knowledge this is not the case in any U.S. jurisdiction with common law provocation. For example, a minority of states that follow the Model Penal Code allow “extreme mental and emotional distress” as a partial defense to assault crimes. *See* Nourse, *supra* note 11, at 1334 n.18. The Australian states of Queensland and Western Australia allow provocation as a complete defense to certain assault offenses. *See* Criminal Code Act, 1899, § 269(1), Sched. 1 (Qld.); Criminal Code Act Compilation Act, 1913, c. 16, § 246 (W. Austl.).

53. LAFAVE, *supra* note 40, at 777.

54. *Id.* at 775 (defining adequate provocation as “a provocation which would cause a reasonable man to lose his normal self-control”).

55. *Id.* at 776 (describing provocation as inducing “emotional disturbance ... (in earlier terminology, while in a ‘heat of passion’)”).

the adequate provocation requirement: provocation is adequate if it would have induced heat of passion in the reasonable person *at the time* the killing occurred.⁵⁶ LaFave's fourth obstacle is likewise best treated as an aspect of the requirement that the killing occur *while* the killer is in the heat of passion: a defendant who has cooled off in the period between the provoking incident and the act of killing is no longer in the heat of passion when the killing occurs.⁵⁷

Other commentators refer to provocation as consisting of a subjective requirement and an objective requirement, or, in some cases, a descriptive component and an evaluative component. Again, these elements map onto the requirements we refer to as heat of passion and adequate provocation. Whether the defendant was in fact subject to the heat of passion at the time of the killing is commonly described as the doctrine's subjective component, whereas the question of adequacy of provocation (usually by reference to whether a reasonable person would have been provoked) is referred to as the objective component. We have chosen to use the heat of passion and adequate provocation terminology, rather than the subjective and objective terminology, for several reasons. Heat of passion and adequate provocation are more commonly used and are more transparent and evocative of the requirements to which they refer.⁵⁸

In a recent thought-provoking article, Stephen Garvey describes the provocation defense as having three requirements: "(1) the *adequate-provocation* requirement; (2) the *passion* requirement; [and] (3) the *reasonable loss of self-control* requirement."⁵⁹ This classification of the elements of provocation, we suggest, is not the most useful way to analyze the defense. The third of Garvey's requirements conflates two elements best kept separate—namely,

56. To the extent that a reasonable cooling-off period is a separate requirement of provocation, it nonetheless ought not be treated as a central feature of the doctrine. Not all jurisdictions limit provocation to circumstances in which a reasonable person would not have had time to "cool down." *See id.* at 786.

57. *Id.*

58. Using the terms "subjective" and "objective" for the requirements of provocation also runs the risk that we will be misunderstood as endorsing the view that justifications are purely objective whereas excuses are purely subjective—a view we do not hold.

59. Garvey, *supra* note 47, at 1691. Garvey describes these three requirements as constituting "the core elements of the defense itself." *Id.* His list of the doctrine's basic elements also includes the legal effect of the defense, "which is to mitigate, not to exonerate." *Id.*

that the defendant actually lost self-control and that this loss of self-control was reasonable. Moreover, Garvey's requirement that the defendant actually lost self-control is merely an alternate way to describe the passion requirement: the "passion" required is emotion of a kind and to a degree that interferes with the defendant's ability to exercise self-control.⁶⁰ The requirement that this loss of self-control be reasonable is, likewise, simply another way to frame the requirement of adequate provocation: provocation is adequate if it would have provoked an "ordinary," "reasonable," or "average" person.⁶¹

The most useful framework for understanding the elements of provocation is in terms of the dual requirements of heat of passion and adequate provocation. Together with the partial nature of the defense and its limitation to the offense of murder, these requirements constitute the features that a theory of provocation must account for. Other rules that flesh out the doctrine are best understood as falling under the umbrella of either heat of passion or adequate provocation.⁶² We have deliberately chosen this nomenclature to be neutral with respect to the disagreements about what provocation counts as "adequate" and the precise relationship between the requisite emotional disturbance and self-control.

2. *The Model Penal Code*

The Model Penal Code mitigates a killing from murder to manslaughter if it occurred "under the influence of extreme mental

60. While the requirement is often stated in terms of *loss* of self-control, this is misleading. A better understanding of the required passion is that it *impairs* the defendant's ability to conform his actions to the balance of reasons applicable in the circumstances, and thus emotional disturbance makes it more difficult—but not impossible—to act in the correct manner. See *infra* Part II.B (detailing passion's effect on self-control).

61. The cases on provocation inconsistently describe the appropriate standard, using these terms and numerous others interchangeably. See Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 433. We have therefore chosen to use "adequate provocation" as a way of describing this requirement while remaining agnostic as to whether the standard is that of an *ordinary man* rather than a reasonable man or a reasonable person, and so on.

62. Other rules that flesh out these two essential features of provocation in at least some jurisdictions include the requirement that the provocation be *sudden*, that the provocation be more than *mere words*, that the provocation consist of a wrong to the defendant rather than to a third party, and that the emotion caused by the provocation be *anger* or *resentment*. See LAFAYE, *supra* note 40, at 775-88; Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 432-34; Garvey, *supra* note 47, at 1687 n.35, 1689 n.38.

or emotional disturbance for which there is reasonable explanation or excuse.”⁶³ Eleven states currently have statutes containing this provision, in full or in part.⁶⁴ While this provision has not been incorporated into state law to the same extent as some other parts of the Code, and some jurisdictions that enacted the Code’s formulation soon reverted to the common law version of provocation,⁶⁵ it is nonetheless a significant alternative to common law provocation.

The Model Penal Code’s EMED formulation represents a substantial reform of the provocation defense. The EMED defense is not restricted to loss of self-control caused by passion stemming from adequate provocation. The disturbance undermining self-control may be mental as well as emotional, and the emotional or mental disturbance need not arise from provoking conduct at all.⁶⁶ When provocation occurs, the EMED defense may apply regardless of whether the person killed was the provoker, or whether the provocation was directed at the defendant or a third party. The Model Penal Code does require that the excuse or explanation for the actor’s distress be reasonable, but the reasonableness of the excuse or explanation is “determined from the viewpoint of a person in the actor’s situation under the circumstances as he believes them to be.”⁶⁷

Because of these differences between the common law defense of provocation and the Model Penal Code’s EMED defense, the theory that best explains the features of common law provocation may not best explain the EMED defense, and vice versa. In this Article, we present a theory of common law provocation with a relatively brief discussion of the implications of this theory for the Model Penal Code’s EMED defense.

63. MODEL PENAL CODE § 210.3(1)(b) (1962).

64. Nine states have enacted the Code’s formulation in full: Arkansas, ARK. CODE ANN. § 5-10-104(a)(1) (West 2010); Connecticut, CONN. GEN. STAT. ANN. § 53a-54a(a) (West 2010); Delaware, DEL. CODE ANN. tit. 11, §§ 632(3), 641 (2010); Hawaii, HAW. REV. STAT. § 707-702(2) (2010); Kentucky, KY. REV. STAT. ANN. §§ 507.020(1)(a), 507.030(1)(b) (West 2009); Montana, MONT. CODE ANN. § 45-5-103(1) (2009); New York, N.Y. PENAL LAW § 125.20(2) (McKinney 2010); North Dakota, N.D. CENT. CODE § 12.1-16-01(2) (2009); and Oregon, OR. REV. STAT. ANN. §§ 163.115(1)(a), 163.118(1)(b), 163.135 (West 2010). Two states have enacted part of the extreme emotional disturbance provision: New Hampshire, N.H. REV. STAT. ANN. § 630:2(I)(a) (2010); and Utah, UTAH CODE ANN. § 76-5-205.5(1)(b) (West 2010).

67. MODEL PENAL CODE § 210.3(1)(b).

II. THEORIES OF PROVOCATION

A. Overview of Defenses

All commentators seem to agree that provocation is best conceptualized as a partial defense.⁶⁸ (We call this the “Partial Defense Thesis.”) We agree. Provocation is not merely a mitigating factor relevant to determining the severity of a sentence; generally, provocation results in conviction for a separately denominated offense, namely, voluntary manslaughter.⁶⁹ Nor is provocation manslaughter merely a different offense than murder, like assault or involuntary manslaughter. As with other defenses such as insanity or self-defense, and unlike involuntary manslaughter or assault, a provoked killing satisfies all the elements of murder but does so in circumstances that make a murder conviction inappropriate.⁷⁰ Unlike with *complete* defenses such as insanity or self-defense, if the extenuating circumstance is provocation, conviction for a lesser crime—voluntary manslaughter—is still appropriate, making the defense of provocation *partial* in nature.

Most commentators, moreover, agree that there are three—and only three—basic species of defense: (1) justifications, (2) excuses, and (3) nonexculpatory defenses.⁷¹ (We call this the “Exhaustive Classification Thesis,” and understand it to be capacious enough to

68. The term “defense” is used ambiguously in criminal law. Broadly understood, a “defense” is any doctrine that precludes the defendant from being convicted. For example, the principle that a defendant cannot be convicted of an offense in the absence of proof of every element in the offense definition is sometimes referred to as the “absent-element” or “failure of proof” defense. *See, e.g.*, LAFAVE, *supra* note 40, at 445-46 (using the term “failure of proof” to refer to “absent-element” defenses); Paul H. Robinson, *Criminal Law Defenses: A Systematic Analysis*, 82 COLUM. L. REV. 199, 203 (1982) (suggesting that defenses consist of five sorts: absent-element defenses, offense modifications, justifications, excuses, and nonexculpatory defenses). However, this principle is better conceived as a normal rule of liability rather than as a defense. *See, e.g.*, ROBINSON, *supra* note 50, at 379-80. We therefore use the term “defense” narrowly to mean doctrines that preclude conviction for an offense despite all the elements of the offense definition being satisfied. The consensus among commentators is that provocation is a partial defense in this narrow sense of “defense.” *See infra* note 74 and accompanying text.

69. In a small minority of states, the defense of provocation results in conviction for a lower degree of murder. *See supra* note 1.

70. *See* LAFAVE, *supra* note 40, at 775-76.

71. *See, e.g.*, Berman, *Justification and Excuse*, *supra* note 2, at 6 & n.8.

allow for combinations of the three basic forms of defenses.) If this orthodox view is correct, provocation manslaughter would be a partial version of one or more of these types of defense. No one believes that provocation is a nonexculpatory defense. This category covers defenses related to public policy considerations independent of the culpability of the defendant, such as statutes of limitation for criminal prosecution.⁷² This leaves justification and excuse as the remaining candidates. Almost everyone concludes—or, perhaps more accurately, assumes—that provocation must be in the nature of excuse or justification, albeit partial.⁷³ In Part II.B, we describe and critique the existing accounts of provocation, focusing primarily on the predominant view of partial excuse, but also addressing contrary views that claim provocation to be either a partial justification or—in denial of the exhaustive classification thesis—partial forms of neither justification nor excuse.

B. Critical Overview of Existing Accounts of Provocation

Over the years, criminal law theorists have contributed scores of accounts aimed to describe and rationally reformulate the theoretical underpinnings of provocation doctrine. Some of these efforts are difficult or contestable to classify, for we often find ourselves resisting the authors' own characterizations of their theories. Our overview, then, proceeds as follows. The dominant view is that provocation is a partial excuse. If it is a partial excuse, then some sense must be made of the adequate provocation prong. Roughly speaking, some partial excuse theorists believe that the adequate provocation prong should be abandoned, some view it as requiring that the heat of passion itself be excused, and the remainder view it as requiring that the heat of passion be justified. A second position views provocation as partially justified. A third view sees it as a combination of partial justification and partial excuse. As best we can tell, the third position has been endorsed by just two scholars over the past fifty years. It is the view that this Article will develop and defend. The final position rejects the justification/excuse framework.

72. LAFAVE, *supra* note 40, at 448.

73. There are notable exceptions to this position, including theorists such as Kahan and Nussbaum who claim provocation sounds in neither justification nor excuse. We address these theories in Part II.B.

1. *Partial Excuse*

The dominant view holds that provocation is in the nature of a partial excuse.⁷⁴ As Timothy Macklem and John Gardner observe, “[b]y common consent, provocation is a (partial) excuse for murderous actions.”⁷⁵ Partial excuse theories treat the heat of passion requirement as the key element of the provocation doctrine.⁷⁶ The central idea is that heat of passion impairs a person’s agency. A person affected by extreme anger finds it more difficult to exercise self-control than a person in a cooler emotional state. Proponents of partial excuse theories of provocation believe that our “common experience” demonstrates that anger undermines our ability to make appropriate choices,⁷⁷ and therefore makes us “less *able* to respond in a legally and morally appropriate fashion.”⁷⁸ A defendant who kills while under the influence of heat of passion is therefore less blameworthy than had the killing occurred when the defendant’s choice-making capabilities were unimpaired, and hence deserves conviction for a lesser offense concomitant with lesser punishment. From this perspective, provocation manslaughter is a “concession to human frailty.”⁷⁹ It is a concession to a particular kind of human frailty: our susceptibility to being overborne by strong emotions. Like complete excuses such as insanity, the partial defense of provocation is premised upon respect for individuals as

74. The most prominent advocate of a partial excuse rationale for provocation is Joshua Dressler. See generally Dressler, *Provocation*, *supra* note 9; Dressler, *Rethinking Heat of Passion*, *supra* note 41; Joshua Dressler, *Why Keep the Provocation Defense?*, 86 MINN. L. REV. 959 (2002) [hereinafter Dressler, *Why Keep the Provocation Defense?*]. Other accounts of provocation manslaughter that sound in partial excuse include SUZANNE UNIACKE, PERMISSIBLE KILLING: THE SELF-DEFENSE JUSTIFICATION OF HOMICIDE 13-14 (1994); Baron, *supra* note 8; Kent Greenawalt, *Distinguishing Justifications from Excuses*, 49 LAW & CONTEMP. PROBS. 89, 96 (1986); Macklem & Gardner, *supra* note 11, at 819; and Uma Narayan & Andrew von Hirsch, *Three Concepts of Provocation*, 15 CRIM. JUST. ETHICS, 18-19 (1996).

75. Macklem & Gardner, *supra* note 11, at 819.

76. See Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 464-65.

77. *Id.* at 463.

78. *Id.* at 464.

79. The judgments and commentaries that characterize manslaughter in this way are legion. The most commonly cited early authorities include *People v. Maher*, 10 Mich. 212 (1862) (holding that the law designates provocation as manslaughter “out of indulgence to the frailty of human nature”); *R v. Hayward*, (1833) 6 C. & P. 157, 159 (Eng.) (“[T]he law, in compassion to human infirmity, would hold the offence to amount to manslaughter only.”); and 4 WILLIAM BLACKSTONE, COMMENTARIES *191 (1791).

“choosing beings.”⁸⁰ Provoked killers are entitled to lesser punishment because heat of passion diminishes a person’s choice-making capacity.

The phrase “loss of self-control” is commonly used to explain the effect of heat of passion. This is misleading. In provocation, heat of passion interferes with, but does not completely destroy, an actor’s capacity to control conduct. The claim is not that the provoked killer *could not* control his conduct, but that in the circumstances such control was more difficult—phenomenologically speaking.⁸¹ When a person is completely unable to control his behavior, the appropriate response, at least in principle, is to hold him criminally blameless—that is, to treat the person as completely excused.⁸² Heat of passion is a *partial* excuse because the actor’s choice-making capacities are so substantially undermined that it would be unfair to treat the actor as fully blameworthy, although his choice-making capacities are not completely extinguished.⁸³

We do not challenge this understanding of the relationships among anger, rational choice-making capacity, blameworthiness, and criminal liability. We accept that anger can interfere with our abilities to make appropriate choices about conduct,⁸⁴ that degree of control is relevant to moral blameworthiness, and that persons

80. See, e.g., H.L.A. HART, PUNISHMENT AND RESPONSIBILITY 33 (1968).

81. In the provocation manslaughter literature, self-control is generally understood as a psychological, experiential, or phenomenological concept, not as a contra-causal one. Like other participants in the debate, we wish to bracket worries touching on the metaphysics of free will.

82. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 464.

83. See, e.g., Dressler, *Why Keep the Provocation Defense?*, *supra* note 74, at 983 (“It is precisely because we believe that the provoked party’s capacity for self-control is not completely undermined that the defense is partial.”).

84. This is not to say that we accept it is natural to “lose control” in specific situations, such as a husband witnessing his wife’s adultery. *But cf.* HART, *supra* note 80, at 33 (stating that “common sense generalizations” about “human nature” tell us that men are “capable of self-control when confronted with an open till but not when confronted with a wife in adultery”). Nor are we denying that our emotions themselves have a cognitive component or that people are often capable of restraint while under the influence of great anger. See Kahan & Nussbaum, *supra* note 65, at 273 (proposing the evaluative conception of emotion as superior to the mechanistic conception); Rozelle, *supra* note 12, at 225 (suggesting that “a policeman at the elbow” usually enables a person to control her actions, despite emotional turmoil). None of these views are incompatible with the claim that heat of passion can make self-control more difficult. Anyone who has been deeply wronged, or even cut off in traffic, will have experienced that maintaining self-control while angry requires greater psychic effort. For a recent critique of the connection between capacity for self-control and criminal responsibility, see Pillsbury, *supra* note 7, at 149-58.

should not be punished in excess of what their blameworthiness warrants.⁸⁵ Indeed, we accept that partial excuse provides a rationale for the provocation doctrine's heat of passion requirement. However, the orthodox view of provocation as partial excuse must also explain the doctrine's adequate provocation requirement. This has proven more difficult.

Individual theories of provocation as partial excuse vary regarding the adequate provocation requirement. Some theorists argue that the adequate provocation requirement should be abandoned and that heat of passion alone should suffice to reduce an offense from murder to voluntary manslaughter. On this view, the only relevant inquiry is the subjective question of whether the defendant in fact had lost self-control to the requisite degree.⁸⁶ Note that this position is similar to, but more extreme than, that of the Model Penal Code's EMED defense, which "subjectivizes" or "particularizes"—but does not eliminate—the requirement that the mental or emotional distress be reasonable.⁸⁷

Most contemporary scholars, however, including most proponents of partial excuse, resist this purely subjective approach.⁸⁸ Most believe that the provocation defense ought not be available to all actors who killed while under the influence of heat of passion. According to these theorists, a defendant whose partial loss of control was brought about by a trivial slight deserves to be convicted of murder, not manslaughter.⁸⁹ Most partial excuse theorists therefore

85. The extent of the contemporary embrace of this last proposition, often running under the heading of "negative retributivism" or "side-constrained consequentialism," is discussed in Mitchell N. Berman, *Two Kinds of Retributivism*, in R.A. DUFF & STUART GREEN, *THE PHILOSOPHICAL FOUNDATIONS OF CRIMINAL LAW* (forthcoming 2011). Of course, that undermined choice-capacity reduces blameworthiness and thus demands a reduction in criminal punishment, all else being equal, does not itself say anything about the class or title of offense for which one should be convicted. As will be made plain below, we believe that undermined choice-capacity alone is not the best explanation or justification for treating a provoked killing as manslaughter rather than murder.

86. See, e.g., J.C. SMITH & BRIAN HOGAN, *CRIMINAL LAW* 215 (1st ed. 1965); Peter Brett, *The Physiology of Provocation*, 1970 CRIM. L. REV. 634, 638; Alec Samuels, *Excusable Loss of Self-Control in Homicide*, 34 MOD. L. REV. 163, 170 (1971); Richard Singer, *The Resurgence of Mens Rea: I—Provocation, Emotional Disturbance, and the Model Penal Code*, 27 B.C. L. REV. 243, 290 (1986); Jack K. Weber, *Some Provoking Aspects of Voluntary Manslaughter Law*, 10 ANGLO-AM. L. REV. 159, 160 (1981).

87. Nourse, *supra* note 11, at 1339-40; see also GEORGE FLETCHER, *RETHINKING CRIMINAL LAW* § 4.2.1, at 246 (1978).

88. See Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 466, 468.

89. See *id.* at 466-68.

support retaining the adequate provocation requirement, and generally argue that it properly serves to ensure that the emotional state undermining self-control is itself either excused or justified.

a. Excused Emotion

Joshua Dressler explains the adequate provocation requirement as ensuring that the defendant's heat of passion—that is, the emotional state—is itself excused.⁹⁰ According to Dressler:

[P]rovocation is an excuse premised upon involuntariness based upon reduced choice-capabilities. If the doctrine is to be defensible, however, it must follow that the anger which undermines choice-capability is itself formed under circumstances in which the actor cannot be fairly blamed for his anger. Otherwise, we have a case of voluntary anger, no more morally deserving of mitigation than voluntary intoxication.⁹¹

In Dressler's view, provocation is excuse all the way down. To him, the rationale for excuse is interference with choice. Excuse "generally involves situations where an actor is not blameworthy," or not fully blameworthy,⁹² because the actor's "ability to make meaningful choices is dramatically reduced."⁹³ But if the actor is responsible for *choosing* an emotional state that makes control of conduct more difficult, we are entitled to blame the actor for the

90. Dressler seems to have modified his views on this point in his more recent scholarship, but not to a degree that affects his underlying claim. In his earlier work, Dressler expressly denied that anger resulting from adequate provocation was justified; it was merely blameless, that is, excused. *See id.* at 464-65. However, he has more recently admitted that some provocation entitles a person to feel anger, so that "we may characterize the emotion as, in some sense, 'justifiable.'" Dressler, *Why Keep the Provocation Defense?*, *supra* note 74, at 972. But Dressler continues to insist that, while provoked anger *may* be justified, it *need* not be justified in order for provocation to apply. In other words, that the anger is justified is not a requirement of the provocation defense; that the anger is "excusable" suffices. *Id.* at 973.

91. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 464. That a person who has become voluntarily intoxicated cannot avoid responsibility for a criminal offense by arguing that he lacked the requisite mental state is an example of a *forfeiture rule*. The defendant forfeits his claim because he voluntarily created the conditions that he is relying on to avoid blame. *See id.* Dressler's approach is therefore sometimes described as treating the adequate provocation requirement as a forfeiture rule. *See, e.g.,* Garvey, *supra* note 47, at 1709, 1710 n.98.

92. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 460.

93. *Id.* at 461.

emotional state—and therefore to blame the actor for the wrongful conduct that eventuates. The actor is entitled to mitigation only when her emotional state is itself *involuntary*, by which Dressler means that “the actor’s choicemaking capabilities have been so seriously undermined that the actor cannot be justly blamed” for the emotional state.⁹⁴

The adequate provocation requirement fulfills the role of distinguishing between heat of passion for which the actor is to blame and heat of passion for which the actor is excused. The defendant is to blame for anger in the absence of adequate provocation—that is, if “the ordinary law-abiding person would not become angry [in that] particular provocative situation.”⁹⁵ Thus, on Dressler’s account, whether a person chose to be angry is determined by whether an ordinary or reasonable person would have been angry in the relevant circumstances. If an ordinary person would have been angry—that is, if there was reasonable provocation—then the actor is treated as not responsible for the anger and therefore less blameworthy for the deadly conduct. But if an ordinary person would not have been angry, then the actor is treated as becoming angry voluntarily and therefore completely blameworthy for the act of killing.

We find this account implausible. Assuming *arguendo* that we ought to draw a line between anger for which the actor is responsible and anger for which the actor is not responsible, the requirement of adequate provocation does not achieve this distinction because the correlation between whether an individual’s anger is voluntary (in Dressler’s sense of voluntary) and whether a reasonable person would have become angry in the same circumstances is simply too weak. We all know people who are more easily angered than the average person, just as we know people with an unusually high ability to remain calm.⁹⁶ To some extent, this may be due to a failure of willpower: we may say that such people indulge their anger. But it is also surely due to those standing dispositions that we call character: resisting anger and maintaining self-control is simply more difficult for some people than others. Now, the degree to which we are responsible for our own character, and therefore to

94. *Id.*

95. *Id.* at 464.

96. The authors believe that at least one of them falls in the latter category.

blame for our bad character, is a difficult question. We cannot adequately answer that question here. Suffice it to say that our characters are formed by some combination of innate tendencies, upbringing, and choices we make about how we live and act. While we bear *some* responsibility for our characters, they are not the sole product of our conscious choices. The mere fact that a defendant was more easily angered than an ordinary person does not necessarily demonstrate that the defendant is more responsible, and therefore more blameworthy, for his anger.

If we are concerned, as Dressler is, about whether a defendant is to blame for his or her emotions, the current doctrine's inquiry into the adequacy of provocation is misguided. A more appropriate inquiry would look to whether the defendant had inculcated habits of emotional discipline or had been subjected to inappropriate influences or trauma during his or her emotional development. The adequate provocation requirement is simply not directed toward factors that distinguish between whether a defendant is to blame for his or her emotional state, and therefore whether the heat of passion experienced ought to be excused.

b. Justified Emotion

Some commentators who claim that provocation is a partial excuse explain the adequate provocation requirement by arguing that the defendant's heat of passion is *justified* rather than excused.⁹⁷ Scholars who take this approach argue that a person who kills in the heat of passion is entitled to have his *act* of killing partially excused only if his *emotion*—heat of passion—was justified. Hence the requirement of adequate provocation: anger is justified only if it is in response to adequate provocation. Anger in response to trivial provocation, or no provocation at all, is not justified.

Despite the element of justified emotion, advocates of this approach characterize their accounts as excuse theories.⁹⁸ Nonetheless, this approach concedes that while the usual conception of

97. See, e.g., HORDER, *supra* note 13, at 156, 160-61; SAMUEL H. PILLSBURY, JUDGING EVIL: RETHINKING THE LAW OF MURDER AND MANSLAUGHTER 141 (1998); Baron, *supra* note 8, at 364-65; Macklem & Gardner, *supra* note 11, at 819; Nourse, *supra* note 11, at 1338-39; Pillsbury, *supra* note 7, at 143; von Hirsch & Jareborg, *supra* note 11, at 248.

98. See, e.g., Nourse, *supra* note 11, at 1338 n.40 (declaring that, on her account, provocation "remains a partial excuse").

excuse due to loss of self-control can explain provocation's heat of passion requirement, it cannot account for the adequate provocation requirement.⁹⁹ So the concept of justification is recruited, in a limited capacity, to fill this explanatory gap. Justified emotion theorists seek to rely on excuse to explain the heat of passion requirement and justification to explain the adequate provocation requirement.¹⁰⁰ But most justified emotion theorists insist that only the *emotion* is justified; they deny that the *act* of killing is even partially justified.¹⁰¹ By restricting the application of justification to the emotion, not the act, they claim to avoid two criticisms that their theories would otherwise attract—namely, the charge that an act cannot be both partially excused and partially justified,¹⁰² and the claim that provoked *killings* should not be considered partially justified.¹⁰³

The difficulty for justified emotion theories of provocation is how to explain why, if the killing is partially excused (but still wrong) because the actor was subject to extreme emotion, the defense is available only if the extreme emotion was justified. A defendant has not lost control to any lesser degree by virtue of the fact that his heat of passion was unwarranted in the circumstances. To put it another way, if mitigation is available despite the fact that *killing* is entirely unjustified, why does the fact that the defendant's *emotion* is unjustified preclude mitigation? If a person who kills for the wrong reason can receive mitigation, why not a person who gets angry for the wrong reason?

Justified emotion theories fail to overcome this difficulty. Despite being characterized as theories of (partial) excuse, they turn out not to be excuse theories at all—not on the traditional understanding of excuse. Justified emotion theorists reject the standard view that excuse is based on loss of self-control.¹⁰⁴ The role of anger is

99. *See id.* at 1394.

100. *See id.*

101. *See, e.g., id.* at 1394-95 (“It is by focusing on the emotion, rather than the act, that my proposal distinguishes itself quite easily (both in theory and practice) from the traditional model of provocation as partial justification.”); von Hirsch & Jareborg, *supra* note 11, at 248-49 (emphasizing that, on their account of provocation, it is only the defendant's “*anger* that is warranted, not the deed that results from it”).

102. *See, e.g.,* Nourse, *supra* note 11, at 1394.

103. *See, e.g., id.* at 1395 & n.374.

104. *See, e.g.,* Macklem & Gardner, *supra* note 11, at 819 (arguing that those who believe that we excuse because of loss of self-control “fall into the trap of confusing excuses with

transformed from undermining volition to providing justified reasons for acting via its cognitive component.¹⁰⁵ Justified emotion theories are in fact properly understood as theories of partial justification: under these theories, the act of killing should be understood as partially justified. By invoking justified emotion, they explain the adequate provocation requirement, but only at the expense of no longer being able to explain the heat of passion requirement.

For justified emotion accounts of provocation, the defendant's reasons for acting do all of the mitigating work. The relevance of heat of passion is only that some instances of heat of passion embody a justified judgment—namely, that the defendant has been grievously wronged. The “quantity or intensity of the emotion”¹⁰⁶ is irrelevant; interference with self-control is not the source of mitigation.¹⁰⁷ Emotion per se is therefore unnecessary for a defendant to deserve the provocation defense, because she can hold the justified belief that she has been wronged in the absence of heat of passion.

Consider Parent, whose child has been killed by Villain. Justified emotion theories cannot distinguish between the case in which Parent kills Villain in the heat of passion after witnessing the killing, and the case in which Parent calmly kills Villain months later during Villain's trial. In both cases, Parent can hold the same

denials of responsibility”); Nourse, *supra* note 11, at 1398 (arguing that to adopt a theory of justified emotion “requires us to reject the idea upon which almost all contemporary theories of the defense are predicated: that we partially excuse because the defendant lacks a full or fair capacity for self-control”).

105. See, e.g., Macklem & Gardner, *supra* note 11, at 819-20 (arguing that in making the partial excuse of provocation, the defendant admits his action was unjustified, but relies on the fact that the “cognitive component” of his anger was justified); Nourse, *supra* note 11, at 1390 (arguing that the adequately provoked defendant's “excuse” is provided by “the reasons for the emotion,” and hence the “reasons why the defendants claim they have killed,” not “[t]he quantity or intensity of the emotion”). Macklem and Gardner's theory of provocation has many nuances and draws on Gardner's complex and nontraditional theory of defenses that he presented in two earlier papers. See John Gardner, *Justification and Reasons*, in A.P. SIMESTER & A.T.H. SMITH, *HARM AND CULPABILITY* 103, 118-20 (1996); John Gardner, *The Gist of Excuses*, 1 *BUFF. CRIM. L. REV.* 575, 578-79 (1998). Because of its complexity, a full analysis of this theory would require lengthy explication and is therefore beyond the scope of this Article. For present purposes, it is enough to observe that Macklem and Gardner's theory of provocation cannot account for the heat of passion requirement.

106. Nourse, *supra* note 11, at 1390.

107. See, e.g., Pillsbury, *supra* note 7, at 143 (“I disagree that emotionally-related cognitive dysfunction should mitigate punishment ... regardless of reasons for emotion.”).

(justified) judgment that Villain committed a grave wrong against his or her child, and kill for that reason. The cognitive component of anger is not the only avenue through which one can have a justified belief that one has been seriously wronged. One can have that belief—and be justified in having that belief—in the absence of emotion. Justified emotion theories consequently provide no rationale for restricting the provocation defense to cases in which the heat of passion requirement is satisfied.¹⁰⁸

2. A Heretical View: Partial Justification

A small handful of scholars reject the orthodox view and argue that provocation functions as a partial justification.¹⁰⁹ In contrast to the views so far discussed, partial justification theorists argue that a provoked killing warrants mitigation because such a killing is *less wrong* than an unprovoked killing. These theorists also argue that partial justification is the *only* rationale for provocation—that is,

108. Nourse argues that

we partially excuse ... because the law sees reason in the defendant's emotion, reason that mirrors the law's own sense of retribution. In short, we partially excuse when coherence demands it, when the defendant appeals to the very emotions to which the state appeals to rationalize its own use of violence.

Nourse, *supra* note 11, at 1338. But a defendant can have reasons that mirror the law's own reasons for using violence without being subject to grave emotions. Nourse presents no explanation for why coherence does not demand that we partially excuse such a defendant.

109. The most prominent supporter of this view is Finbarr McAuley. See Finbarr McAuley, *Anticipating the Past: The Defense of Provocation in Irish Law*, 50 MOD. L. REV. 133, 150 (1987) [hereinafter McAuley, *Anticipating the Past*] (concluding that provocation functions as "a partial justification rather than a partial excuse"); Finbarr McAuley, *The Theory of Justification and Excuse: Some Italian Lessons*, 35 AM. J. COMP. L. 359 (1987). Some commentators have argued that, although provocation in its current form is *not* a partial justification, it *should* be. See, e.g., Rozelle, *supra* note 12, at 200 (proposing a reform of provocation that would permit the defense "only to those defendants who were legally entitled to use some amount of force when they killed"). Douglas Brown recently attributed a partial justification theory to the Law Commission of England's 2003 report on partial defenses. Douglas J. Brown, *Disentangling Concessions to Human Frailty: Making Sense of Anglo-American Provocation Doctrine Through Comparative Study*, 39 N.Y.U. J. INT'L L. & POL. 675, 704 (2007) (referring to LAW COMM'N, PARTIAL DEFENCES TO MURDER: FINAL REPORT (2004) [hereinafter LAW COMM'N, FINAL REPORT]). This attribution is dubious. The Law Commission does not explicitly endorse any theory in the Final Report; the best reading of its position is as a justified emotion version of partial excuse. It says, for example, that provocation requires that the defendant's "sense of being severely wronged" should have been justified. LAW COMM'N, FINAL REPORT, *supra*, ¶ 3.65, at 45. It does not say that the *act* should have been justified.

that partial justification alone explains all the elements of the provocation doctrine.

The partial justification rationale has been subjected to two sets of criticisms. The first set rejects the claim that provoked killings are partially justified.¹¹⁰ These criticisms include the claim that the notion of partial justification is incoherent, and alternatively the claim that provocation cannot be a partial justification because provoked killings are just as wrong as unprovoked killings. As the presentation of our own account in Parts III and IV will make clear, we disagree with the substance of these criticisms. On our view, an adequately provoked killing *is* less wrong than the paradigm intentional killing. Importantly, however, we agree with the critics that existing proponents of the partial justification conception have not adequately defended this pivotal claim.¹¹¹ We aim to do better in Part IV, where we defend our thesis against objections.

The second set of criticisms is that, while partial justification theories can explain the adequate provocation requirement, they fail to explain the heat of passion requirement.¹¹² We agree. Restricting the provocation defense to killing in the heat of passion cannot be

110. See discussion *infra* Parts IV.B, IV.C.

111. McAuley's argument rests rather squarely on the fact that mitigation manslaughter is unavailable for the "loss of control brought on by panic or bad news." McAuley, *Anticipating the Past*, *supra* note 109, at 137. Of course, as all commentators acknowledge, this is just the starting point of the inquiry. Yet, from this observation, McAuley requires only one paragraph to reach his conclusion:

Thus while the defence of provocation may well be a concession to the natural human failings that are the lot of every defendant, it is submitted that its true basis is to be found in the contribution of the victim, in the fact that his wrongful conduct was the cause of the defendant's violent outburst.

Id. McAuley never makes clear why the contribution by the victim is the defense's "true basis" despite his acknowledgment that the defense is a contribution to human frailty and his earlier recognition "that there are natural limits to an individual's capacity for self-control which the law cannot afford to ignore." *Id.* at 136-37. McAuley seems to rely on equating the requirement of adequate provocation with wrongful conduct on the part of the deceased. Provocation is adequate, says McAuley, if it "was sufficiently grave to override the ordinary powers of human resistance." *Id.* at 137. He further submits that "*any* conduct which is likely to produce [a violent response is] wrongful in the relevant sense." *Id.* at 138. From this, McAuley concludes that the provocation defense "implies that the defendant was partially justified in reacting as he did because of the untoward conduct of his victim." *Id.* at 139. But McAuley provides no argument for how or why the untoward conduct of the victim partially justifies the defendant's actions, which is, of course, the crucial step in establishing the theoretical bona fides of a theory of partial justification.

112. See, e.g., Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 458-59; Garvey, *supra* note 47, at 1694, 1697.

explained on the basis of partial justification. Indeed, Finbarr McAuley, the most prominent proponent of the partial justification approach, admits as much. McAuley declares that on a partial justification theory of provocation, “a defendant who can show that he killed in the face of substantial provocation should, *on this ground alone*, be entitled to the defence.”¹¹³ Whatever the merits or demerits of McAuley’s position as a matter of reform, to the extent that he is purporting to provide a descriptive theory of provocation, his statement amounts to an admission of defeat. A theory of provocation that cannot explain the heat of passion requirement fails to describe the doctrine of provocation in its current form. Moreover, we will argue in Part III.B that substantial considerations do support the doctrine in its current form.

3. *Partial Justification and Partial Excuse*

A handful of theorists prior to us have flirted with the idea of treating provocation as both a partial excuse and a partial justification.¹¹⁴ This is not surprising, given the routine acknowledgment by members of the academy that provocation exhibits the *appearance* of both excusatory and justificatory elements.¹¹⁵ But even these scholars stop well short of providing a theoretical rationale for—or even fully endorsing—provocation as partial excuse and partial justification.¹¹⁶ We know of only one descriptive theory of

113. McAuley, *Anticipating the Past*, *supra* note 109, at 156 (emphasis added). McAuley nonetheless states that, “*Undoubtedly*, a defendant who kills after he has regained his composure, or when the effects of the provocation have more or less worn off, is not entitled to the defence.” *Id.* (emphasis added). The reason for this restriction, McAuley claims, is that the composed killer “can hardly claim that it was the provocation which caused his violent outburst.” *Id.* This strikes us as untenable. Recall the case of Parent, who calmly kills Villain, the murderer of Parent’s child, after a significant time has elapsed. It seems perfectly sensible for Parent to claim that Villain’s wrongful conduct caused her violent response.

114. See CYNTHIA LEE, *MURDER AND THE REASONABLE MAN: PASSION AND FEAR IN THE CRIMINAL COURTROOM* 227-28 (2003) (arguing that neither justification nor excuse alone can explain both the heat of passion and adequate provocation requirements); Bergelson, *supra* note 7, at 418 (asserting that “the partial defense of provocation includes elements of both excusatory and justificatory rationales”).

115. See *supra* notes 7-10 and accompanying text.

116. Lee asserts that treating a provoked killing as partially justified is “morally objectionable” and concludes that “[p]rovocation is best understood as a partial excuse, but its justificatory elements should not be ignored.” LEE, *supra* note 114, at 229. Bergelson describes the dual characteristics of provocation as the result of the ad hoc nature of common

provocation based on the view that a provoked killing is properly considered both partially excused and partially justified: that of English scholar Andrew Ashworth.¹¹⁷ But not even Ashworth provides a comprehensive rationale for—and defense of—the hybrid position.

In an article written during the provocation debate's infancy, Ashworth contends that "the doctrine of provocation ... rests just as much on notions of justification as upon the excusing element of loss of self-control."¹¹⁸ He endorses "the claim implicit in partial justification ... that an individual is *to some extent* morally justified in making a punitive return against someone who intentionally causes him serious offence, and that this serves to differentiate someone who is provoked to lose his self-control and kill from the unprovoked killer."¹¹⁹ Ashworth believes the union of the two rationales "is no mere historical accident,"¹²⁰ and that the loss of either aspect would have "significant disadvantages."¹²¹

law development, rather than the basis for a coherent and cohesive rationale. Bergelson, *supra* note 7, at 412-13.

117. The Law Reform Commission of Ireland has recently proposed that provocation *should* be treated as containing both excusatory and justificatory elements. See Consultation Paper on Homicide, *supra* note 6, ¶¶ 7.30-7.31, at 141. But the Commission argues that provocation ought to be *reformed* as a combination of partial excuse and partial justification; it does not argue that provocation as it *currently stands* is best understood according to a hybrid theory. Additionally, the Consultation Paper fails to provide any theoretical framework for the hybrid view or any rebuttal of the contrary views. Indeed, its understanding of the justification/excuse debate, which it describes as having "taken on a somewhat forbidding theoretical character," is shaky at best. *Id.* ¶ 2.01, at 21. The Consultation Paper even contains the curious claim that "the view that the doctrine of provocation rests just as much on notions of partial justification as upon the excusing element of loss of self-control" is "the more settled and accepted academic position on the matter." *Id.* ¶ 2.05, at 23. In sum, the Consultation Paper adds little to the debate about the current theoretical rationale of the provocation defense.

118. Ashworth, *supra* note 6, at 307.

119. *Id.* It is worth noting that even Ashworth hedges his bets, or at least provides an argument in the alternative. He asserts that the adequate provocation requirement "may also be supported by causal reasoning." *Id.* at 308. This proposition is the idea that if the provocation was slight, the true cause of the heat of passion and consequent killing is the defendant's bad character. *Id.* at 307. This position is akin to Dressler's argument that the adequate provocation requirement acts as a forfeiture rule. See *supra* Part II.B.1 (discussing Dressler's partial excuse theory). This presumably explains why Ashworth is sometimes characterized as an advocate of provocation as partial excuse. See, e.g., Garvey, *supra* note 47, at 1682 n.22, 1710 n.98.

120. Ashworth, *supra* note 6, at 317.

121. *Id.* at 319.

Despite his endorsement of a dual rationale, however, Ashworth does not give a detailed theoretical framework for the defense as both partial excuse and partial justification. He says relatively little about what it means for an action to be partially justified, or about how to reconcile the partial excuse and partial justification components of the rationale. In other words, Ashworth's article does not address most of the reasons American scholars give for rejecting a combined rationale for provocation—namely, that excuse and justification are mutually exclusive, and that partial justification is an incoherent notion. That Ashworth does not address these critiques is hardly Ashworth's fault, as his article was written prior to those positions being advanced.

The search for a legitimate rationale for provocation did not capture the imagination of American scholars until the early 1980s.¹²² More surprising is the fact that scholars on this side of the Atlantic have largely failed to engage with Ashworth's substantive claim. Although American authors regularly cite Ashworth's article, they have just as regularly failed to directly address Ashworth's position. For example, Dressler refers to Ashworth's piece as “[a]mong the best English scholarly articles” on provocation,¹²³ yet surprisingly fails to acknowledge Ashworth's position when he rejects a “dual rationalization of a partial defense which is both justification and excuse based.”¹²⁴ Rather than engaging with Ashworth's view, most scholars have simply repeated the “traditional view” that partial excuse and partial justification are mutually exclusive. The view that provocation is both a partial excuse and a partial justification therefore remains in need of a theoretical framework. It is also in need of refutations of the criticisms that have regularly been leveled at the view since Ashworth's article.

4. Rejecting the Justification/Excuse Framework

All the theories we have addressed so far treat provocation as either a partial excuse or a partial justification, in keeping with the

122. See Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 424 n.24 (noting the remarkable lack of interest in the issue and the fact that “[w]hat interest has been demonstrated is largely found in British circles”).

123. *Id.*

124. *Id.* at 438.

exhaustive classification thesis. At least two theories reject this approach: Stephen Garvey's theory of provocation as "akrasia"¹²⁵ and Dan Kahan and Martha Nussbaum's approach based on the evaluative "theory of emotion."¹²⁶ According to these views, provocation is grounded in neither justification nor excuse.

a. Provocation as Akrasia

Garvey proposes to explain the provocation defense by invoking the concept of weakness of will: what the ancient Greeks referred to as akrasia. He begins by distinguishing between "two very different ways"¹²⁷ in which a person can violate an obligation imposed by the criminal law. First, he can defy the law: he can wholeheartedly choose to commit an illegal act¹²⁸ with "*full knowledge of the law and full consent of the will.*"¹²⁹ Second, he can violate a legal obligation, not by defying it, but merely as a result of weakness of will: despite wanting to obey the law, he succumbs to temptation. He violates the law "without wholeheartedly embracing the law-breaking desire that his will translates into action."¹³⁰ The explanation for the provocation defense, says Garvey, is that it "distinguish[es] actors who kill in defiance of the law from those who do not."¹³¹ If an actor kills in defiance of the law, he is guilty of murder. But if he kills due to weakness of will, he is guilty only of manslaughter.¹³²

We find Garvey's account of provocation, though nuanced and original, unsatisfactory for three reasons. First, the account is underspecified. Garvey does not clearly explain *why* the akratic killer deserves mitigation. Second, the explanation that appears most consistent with Garvey's other claims, and therefore most plausibly attributed to him, seemingly commits him to views about the in-principle scope of appropriate mitigation that few commentators are likely to accept. Third, insofar as Garvey and others do believe that, in principle, mitigation should be extended far more

125. Garvey, *supra* note 47, at 1684.

126. Kahan & Nussbaum, *supra* note 65, at 273, 302.

127. Garvey, *supra* note 47, at 1727.

128. *Id.*

129. *Id.* at 1728.

130. *Id.* at 1729.

131. *Id.*

132. *Id.* at 1730-31.

broadly than we think it ought to be, the pragmatic grounds he gives for limiting mitigation as a matter of doctrine are unpersuasive.

To start, Garvey does not flesh out an argument for *why* the akratic killer deserves less punishment than the defiant killer. His article provides some hints as to what the reason for mitigation might be, but none of the reasons is satisfying. Garvey refers to the defiant actor's "excessive pride or hubris,"¹³³ but punishing more severely for hubris amounts to punishing character, a position Garvey emphatically rejects.¹³⁴ Alternatively, the actions of the nondefiant, ambivalent actor might be less wrongful than the actions of the defiant actor. This could be plausible, but only in circumstances in which the actor's ambivalence is due to having some morally relevant reasons (other than self-interest, for example) for being tempted to violate the law. Garvey does not present such limits on the circumstances of nonwholehearted lawbreaking. If he did, his account would collapse into a theory of partial justification.

Garvey comes closest to explaining why the akratic killer deserves mitigation when he declares: "In the end, the culpability of an actor guilty of manslaughter consists in his failure to exercise his capacity for self-control."¹³⁵ From this perspective, Garvey's theory seems best understood as a broad version of partial excuse. On this view, all failed attempts to exercise self-control deserve substantial mitigation—not merely those failures that are due to particular circumstances that make the exercise of self-control more difficult.

If this is Garvey's explanation for why the akratic killer deserves mitigation, however, its implications are bracing. A violation of a duty imposed by the criminal law is akratic if it occurs "in a moment of weakness"—that is, if the actor has a desire to violate the law but also a simultaneous (but lesser) desire to conform to the law.¹³⁶ This ambivalence, we suggest, describes a large number of criminal violations—perhaps even the majority of crimes—and certainly describes those crimes for which substantial mitigation is neither currently available nor, we believe, morally deserved. Garvey's

133. *Id.* at 1728.

134. *Id.* at 1710.

135. *Id.* at 1730.

136. *Id.*

akratic account would apply, for instance, to every thief who steals because his desire for an object of value outweighs his weaker desire to adhere to the law, or to every sex offender who recognizes his sexual urges are unlawful and unsuccessfully attempts to resist them. It would apply, in short, to every failure to resist temptation.

Perhaps, however, the mistake is ours. Perhaps all akratic intentional killers are, in principle, entitled to the same degree of mitigation as that presently afforded to just a small subset of killers under the provocation manslaughter doctrine. If so, however, it would seem at first blush that Garvey's analysis would amount not to a defense of existing doctrine but to a repudiation of it. That is, on Garvey's analysis, the key features of voluntary manslaughter doctrine—namely, heat of passion and adequate provocation—would seem indefensible, for an actor can struggle with the competing desires to kill and to abide by the law without being subject to either heat of passion or provoking conduct.

Garvey resists this conclusion. Acknowledging that “the passion and adequate provocation requirements might appear superfluous,”¹³⁷ he argues that they do play a role—as “*evidentiary rules*.”¹³⁸ That is, the requirements of heat of passion and adequate provocation have evidentiary, but not operative, significance. Although akratic intentional killers who do not satisfy these twin requirements are, as a class, no more blameworthy than those who do, these requirements at least serve to identify, albeit imperfectly, those who are *in fact* akratic.

As it happens, we have considerable sympathy for the impulse to rethink seemingly operative rules of criminal law in evidentiary terms.¹³⁹ But we believe that the requirements of heat of passion and adequate provocation are such poor proxies for the fact of akasia as to make it radically implausible that their function is evidentiary. Garvey argues that “[t]he akasia theory denies the

137. *Id.* at 1733.

138. *Id.*

139. One of us has written at length on this theme. See, e.g., Mitchell N. Berman, *Blackmail*, in THE OXFORD HANDBOOK OF THE PHILOSOPHY OF CRIMINAL LAW (John Deigh & David Dolinko eds., forthcoming 2011) [hereinafter Berman, *Blackmail*] (arguing that the conditional threat in blackmail, the harm requirement in offenses of recklessness, and the peculiar contours of affirmative duties to act can all be explained in evidentiary terms); Mitchell N. Berman, *The Evidentiary Theory of Blackmail: Taking Motives Seriously*, 65 U. CHI. L. REV. 795 (1998).

defense to the inadequately provoked actor ... because his claim to have lost self-control is *incredible*.”¹⁴⁰ In our view, the EMED case law demonstrates that this is not so: the adequacy of provocation is an exceedingly poor proxy for whether someone has in fact experienced substantial impairment of control.¹⁴¹ More importantly, substantial impairment of control is itself a poor proxy for an akratic killing. Consider Garvey’s own euthanasia example.¹⁴² Suppose Terminally Ill, who is suffering enormous pain, pleads with Friend to end her life. We can easily imagine Friend believing that killing is wrong and desiring not to do wrong, but desiring more strongly to implement Terminally Ill’s wishes and put an end to her suffering. A killing in these circumstances would clearly qualify as akratic notwithstanding the absence of both heat of passion and adequate provocation. For these reasons, then, we remain quite skeptical of Garvey’s effort to link his akratic theory of mitigation with anything approximating existing provocation doctrine.

b. The Evaluative Conception of Emotion

Dan Kahan and Martha Nussbaum also propose a theory of provocation that rejects the categories of justification and excuse. They rightly observe that the “most popular account”¹⁴³ of provocation manslaughter is “that a person who kills in anger or rage has limited culpability because ‘his choice capacities have been partially undermined.’”¹⁴⁴ Kahan and Nussbaum reject this orthodox account of provocation as partial excuse for the same reasons we do. They assert that it “fails to make sense of the most basic requirement of the common law formulation: that the defendant’s passion arise from a provocation by the victim.”¹⁴⁵ On a traditional theory of partial excuse, this limitation is inexplicable because an actor’s

140. Garvey, *supra* note 47, at 1735.

141. See, e.g., Nourse, *supra* note 11, at 1332, 1338, 1346, 1407 (cataloguing many cases of “intimate homicide” in which the defendant apparently suffered genuine impairment of control as a result of trivial, nominal, or nonexistent provocation).

142. Garvey describes an “actor who intentionally kills in order to relieve the suffering of a terminally-ill friend.” Garvey, *supra* note 47, at 1698.

143. Kahan & Nussbaum, *supra* note 65, at 305.

144. *Id.* (citing Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 467).

145. *Id.* at 306.

culpability ought to be reduced whenever his choice capacities have been impaired, regardless of the impairment's cause.¹⁴⁶

Kahan and Nussbaum argue instead that provoked killers deserve mitigation because their emotions express "cognitive appraisals" that are morally appropriate and that reflect an appropriate evaluation of the good.¹⁴⁷ Their account of provocation therefore mirrors the justified emotion theories addressed above, in which the defense is deserved when the "cognitive component" of the provoked killer's anger is justified.¹⁴⁸ Consequently, Kahan and Nussbaum's theory has the same fatal flaw as the justified emotion theories: it cannot account for the requirement of heat of passion. Kahan and Nussbaum purport to explain the heat of passion requirement by arguing that it is only when a person kills in the heat of passion that he can be said to act on worthy motives and judgments.¹⁴⁹ Without heat of passion, they claim, "it would be impossible to understand the defendant's act as expressing an appropriate valuation of the good—whether it is the defendant's honor or the dignity or physical security of the defendant's family members—that is threatened by the victim's wrongful provocation."¹⁵⁰

This does not ring true to us. Consider the case of Parent killing Villain, who has murdered Parent's child, or Kahan and Nussbaum's similar example of a mother who kills the man who sexually assaulted her daughter. We can imagine Parent deciding to kill Villain precisely because she values her (or her child's) honor. She might also kill because she values the security of her family members, or the security of Villain's potential future victims. We can imagine a killing for these motives, which Kahan and Nussbaum accept as worthy,¹⁵¹ even when Parent dispassionately kills. A period of time may have passed, during which Parent's passion turned to grief and sorrow or fear of future attacks.

The euthanasia case of Friend killing Terminally Ill also provides a counterexample to Kahan and Nussbaum's claim that a person

146. *Id.*

147. *Id.* at 315.

148. *See supra* Part II.B.1.b. As with justified emotion theories, we believe that Kahan and Nussbaum's theory of provocation is in truth a theory of partial justification. *See Garvey, supra* note 47, at 1718-22.

149. *See Kahan & Nussbaum, supra* note 65, at 315.

150. *Id.*

151. *Id.*

can be said to kill on worthy motives only if they are experiencing the heat of passion. Friend has appropriate beliefs and valuations regarding human suffering even if Friend is not experiencing anger or rage. On Kahan and Nussbaum's view, it is the *judgment* or *evaluation* expressed by rage that does all the work.¹⁵² Emotions do express judgments, but the requisite worthy motives, judgments, and evaluations can exist in the absence of anger or rage. Kahan and Nussbaum's theory therefore cannot explain why heat of passion is required for a defendant to benefit from the provocation defense.

III. OUR ACCOUNT: PARTIAL JUSTIFICATION AND PARTIAL EXCUSE

So far, we have considered the various theories advanced to explain the doctrine of provocation, and we have found each of them wanting. The orthodox view of provocation as a partial excuse cannot account for the doctrinal requirement of adequate provocation. The heretical view that provocation is a partial justification cannot explain the requirement that the killing occur in the heat of passion. Other views that reject—or purport to reject—the traditional justification/excuse framework fail to explain all the elements of provocation, collapse into a partial justification theory, or prove implausible for other reasons.

For our part, we accept that neither partial excuse nor partial justification alone can account for all the central elements of the provocation doctrine. But we do not consequently reject partial excuse and partial justification from the field of explaining provocation. Quite the contrary. We consider both partial excuse and partial justification as components of the rationale underlying provocation.

The short version of our theory is this: Partial excuse and partial justification each provides independent grounds for mitigation. But the mitigation that flows from partial excuse alone is insufficient to warrant treating an intentional killing as manslaughter rather than murder. Ditto the mitigation that flows purely from partial justification. However, when an intentional killing is both partially excused and partially justified, it *is* appropriate to treat the killing as manslaughter, by which we mean that it is appropriate both to

152. *Id.* at 304.

subject the offense to a lower punishment range than is available for murder and to label the offense differently. Hence the provocation defense's dual requirements of heat of passion and adequate provocation: they ensure the defense is available only to those defendants whose killing was both partially excused—because it occurred in heat of passion—and partially justified—because it was in response to adequate provocation.

We present our account in stages. In the remainder of Part III, we provide a brief description of our theory. We sketch our arguments for (1) the claim that partial excuse and partial justification represent dual grounds for mitigation, and (2) the claim that the provocation defense is rightly reserved for the conjunction of partial excuse and partial justification. We elaborate on this account in Part IV in the course of responding to objections that the unorthodox aspects of our account are sure to attract.

A. Dual Grounds for Mitigation

1. Less Blameworthy Due to Emotion

The fact that an actor who intentionally kills another was in an inflamed emotional state that made it more difficult for him to conform his actions to the dictates of the balance of applicable reasons makes him less blameworthy than he would otherwise be. This claim is just the common wisdom that undergirds the dominant partial excuse position on provocation.¹⁵³ We shall therefore spend relatively little time defending it. But we wish to be clear on the scope of the claim: It is a claim merely about mitigation. We are not claiming that the fact that an actor who intentionally kills while experiencing emotional turmoil, without more, supports a conviction for manslaughter, or that a theory based on partial loss of self-control explains all the elements of the doctrine of provocation. We claim simply that the existence of emotional turmoil of a kind that undermines the actor's capacity to conform his actions to those dictated by the applicable guiding reasons deserves *some* mitigation.

153. See, e.g., Dressler, *Provocation*, *supra* note 9, at 469.

The case of *State v. Raguseo* provides an example.¹⁵⁴ The defendant, who was meticulous about his vehicle and parking space, became increasingly angered by repeated unauthorized use of the space.¹⁵⁵ In an argument with a man who had used his parking space and almost hit his car, the defendant became enraged and stabbed the victim to death.¹⁵⁶ However unreasonable the defendant's rage and violence, we can easily see that this unreasonable rage could have undermined his capacity to control himself. He does not deserve a manslaughter conviction as a result of this loss of self-control, but he does deserve some mitigation. He deserves less punishment than would be due had he killed the victim while in full control of his rational faculties.

An example is also provided by the infamous case of *Commonwealth v. Carr*, in which the defendant shot two women, killing one, and claimed that he became enraged at the sight of their "lesbian lovemaking" in the woods.¹⁵⁷ On our account, Carr is not entitled to a manslaughter instruction. But he is less blameworthy than would be a close cousin who coolly and calmly kills women for engaging in lesbian lovemaking. Let us be clear: Carr is not entitled to mitigation relative to the "ordinary" or baseline murderer. But this is not because Carr's loss of control has no mitigating bearing on his blameworthiness. Carr's loss of control mitigates, but the *cause* of his loss of control—his attitude toward his victims—*exacerbates* his blameworthiness. Although these things cannot be measured with any accuracy, the net effect of the mitigating and exacerbating factors might be that Carr deserves roughly the same punishment as the "ordinary murderer." Relative to the cool, collected murderer who kills lesbians out of hatred, however, Carr does deserve lesser punishment—to some degree. That is because the cool, collected murderer is of exacerbated blameworthiness relative to the supposed norm for the class of intentional killers,¹⁵⁸ but does not have any offsetting mitigation due to loss of control. Relative to *that* murderer, Carr's loss of control is (somewhat) mitigating.

154. 622 A.2d 519 (Conn. 1993).

155. *Id.* at 522-23.

156. *Id.*

157. 580 A.2d 1362, 1363 (Pa. Super. Ct. 1990).

158. This is why penalty enhancement for hate crimes is defensible in principle.

The amount of punishment deserved in inadequate provocation cases, however, is not solely a function of the extent to which strong emotion impaired a killer's faculty of rational self-control. We fully agree with Kahan and Nussbaum that the evaluations that undergird the loss of self-control are also relevant.¹⁵⁹ A comparison of Carr and Raguseo illustrates this point. Assuming each was in a similarly compromised emotional state, Raguseo is less blameworthy because his anger is rooted in excessive evaluation of his property,¹⁶⁰ whereas Carr is more blameworthy because his anger is rooted in actual hatred of a class of persons.¹⁶¹

2. *Less Wrongful Due to Reasons for Acting*

That an actor had a good reason for aggressing against his victim renders an intentional killing less wrongful than it would have been absent that reason, notwithstanding that the killing remains wrongful on balance. Killing in response to adequate provocation is wrong—seriously wrong—and deserving of heavy punishment. But it is less wrong, all else being equal, than killing in the absence of provocation.

We are aware that this claim is treated as morally repugnant by many of the critics of partial justification,¹⁶² but we believe it nonetheless true. We provide a more rigorous rationale and defense of the claim in Part IV. For now, we provide just the rudiments—enough to establish the claim's plausibility.

When we refer to intentional killings for which the actor had good reason to aggress against his victim, we mean to refer, roughly, to intentional killings in retaliation for the types of grievous wrongs that would be uncontroversially accepted as adequate provocation.

159. See Kahan & Nussbaum, *supra* note 65, at 274.

160. See *Raguseo*, 622 A.2d at 522-23.

161. See *Carr*, 580 A.2d at 1363.

162. Put briefly, the usual criticism is that treating a provoked killing as less wrong is tantamount to either treating the victim as partly to blame for his own death or treating the victim's life as less valuable than that of a victim who did not provoke his killer. See, e.g., Dressler, *Provocation*, *supra* note 9, at 477 (arguing that partial justification theories involve the notion that the victim's "life is entitled to less protection because of his wrongful behaviour," and that "[w]e value his life less than that of an innocent human being"); Rozelle, *supra* note 12, at 208 ("Explained as a partial justification, provocation mitigation arises from the time-honored sentiment: 'He needed killin'.'").

Intentional killings of this kind remain wrongful. But wrongfulness admits of degrees. It is a commonplace of criminal law and of morality that not all wrongs are created equal. Some wrongs are more—or less—wrongful than others. The complex schemas of stratified punishments for different criminal offenses reflect this basic fact that wrongs vary in degree.¹⁶³

That an intentional killing was in response to a grievous wrong is one of the factors that render it less wrongful. To illustrate the point, recall the case of Parent. Parent discovers that Villain has murdered Parent's child and intentionally kills Villain. Parent's killing of Villain is wrong, but it is less wrong than, say, a garden-variety killing for financial gain. We suspect most readers' intuitions will concur on this. Parent's action is less wrong precisely because of Parent's *reasons* for killing Villain—reasons that issue from the fact that Villain had seriously wronged Parent by killing Parent's child. Note that these reasons, whatever, precisely, they may be,¹⁶⁴ are independent of Parent's emotional state. They apply both in cases where Parent kills while (understandably) in a state of great anger and emotional turmoil, and in cases where parent kills coolly and calmly.

In order to properly isolate the reasons why Parent's killing is less wrong (and to avoid the possibility that our intuitive reactions are unduly colored by assuming that Parent is in emotional turmoil), let us refine the circumstances we are presenting. Suppose Parent coolly kills Villain two years after Villain's killing of Child and after having painstakingly tracked him across the country. Surely we would say that such a killing, while wrong—and perhaps so wrong that Parent ought to be convicted of murder—is nevertheless *less wrong* than it would be had Villain not subjected Parent and Parent's child to a grievous wrong. It is less wrong than a killing of Villain by some unrelated third party. And it is less wrong than was Villain's killing of Child. Surely we would say that Parent deserves a lesser sentence as a consequence of her reason for killing Villain. Villain killing Parent's child provided Parent with reasons

163. See generally Mark Warr, Robert F. Meir & Maynard L. Erickson, *Norms, Theories of Punishment, and Publicly Preferred Penalties for Crimes*, 24 SOC. Q. 75 (1983).

164. This matter is explored in some greater detail in Part IV.C.

to retaliate against Villain, and those reasons lessened, without eliminating, the wrongfulness of Parent's killing of Villain.

If this is the correct understanding of cases of this sort, then the actor's reason for killing partially reduces the wrongfulness of the killing. But recall that a reason that *completely* reduces the wrongfulness of an action—that is, that renders the act not wrongful—is a *justification*. It therefore seems sensible to characterize a reason that merely reduces the wrongfulness of an act as a *partial justification*, and to characterize the less wrongful act as *partially justified*. In Part IV, we will consider at length a number of arguments to the effect that the notion of partial justification is incoherent. We believe these arguments are flawed or, at the very least, overstated. But there is nothing magical about the language of partial justification. Our substantive point is that adequately provoked killings are *less wrong* than those that are not so provoked.

B. The Conjunction Requirement

If what we have said so far is correct—that partial excuse and partial justification each independently provides mitigation—the next task is to explain why provocation should require *both* elements. Why should heat of passion or adequate provocation not each be sufficient, instead of necessary, conditions for provocation, at least so long as the mitigating force of either is adequate, in the particular case, to reach some threshold? We provide two explanations. We call the first response the “additive-proxy account” and the second the “expressive-deterrent account.” They are not mutually exclusive.

1. The Additive-Proxy Account

A defendant who intentionally killed under conditions that give rise to a partial excuse—when his emotional turmoil substantially interfered with his capacity for self-control—merits some amount of mitigation. A defendant who intentionally killed in conditions that give rise to a partial justification—he was grievously wronged and so had reason to retaliate—also deserves a degree of mitigation. But what should we say of the defendant who was subject to both

excusing conditions and justifying conditions?¹⁶⁵ Surely we should say that such a defendant deserves more mitigation than he would if only the partially excusing condition or partially justifying condition applied. That is, the mitigation that flows from partial excuse and partial justification is *cumulative*.

In general, the mitigation due to a defendant whose conduct is partially excused will be insufficient to warrant such a reduction in penalty that would result in a conviction for manslaughter rather than murder. The same applies to a defendant whose conduct is partially justified. In each case, some mitigation in sentencing will be appropriate, but the sentence should nonetheless be higher than the maximum sentence available for manslaughter in most states. The table we have included as an Appendix lists the sentence ranges for murder and provocation manslaughter in each of the fifty states. As this table shows, jurisdictions have adopted widely varying sentencing ranges for both manslaughter and murder. Nonetheless, in the majority of states, the maximum penalty for manslaughter is less than or equal to the minimum penalty available for murder, and is often less by a large margin.¹⁶⁶ In almost all jurisdictions, a manslaughter conviction lowers both the floor and the ceiling of available punishment by a significant degree from that available for a murder conviction.¹⁶⁷ As a general matter,

165. Whatever may be said of the incompatibility of a *claim* of excuse and a *claim* of justification, *see* discussion *infra* Part IV, it is clear that excusing *conditions* do not necessarily exclude justifying *conditions*. Nothing in the nature of the conditions that give rise to excuse prevents the simultaneous existence of conditions that give rise to justification. To borrow a term from Kent Greenawalt, it is possible for the elements of excuse and justification to “coalesce.” Greenawalt, *supra* note 74, at 96, 103. This is true at both the level of complete defenses and partial defenses. An insane person may kill in self-defense. *See* Douglas Husak, *On the Supposed Priority of Justification to Excuse*, 24 *LAW & PHIL.* 557, 576 (2005) [hereinafter Husak, *Justification to Excuse*]. Similarly, a person under the influence of extreme anger can have reason to retaliate violently.

166. For example, the penalty range for provocation manslaughter in Colorado is three to six years (or five to twelve years if aggravated), whereas the penalty for murder is life in prison. *See infra* Appendix. Other states in which the minimum penalty for murder is significantly higher than the maximum penalty for manslaughter include Delaware, Florida, Georgia, Hawaii, Iowa, Kentucky, Massachusetts, Michigan, and New Jersey. *See infra* Appendix. In sum, the maximum penalty for manslaughter is less than the minimum penalty for murder in twenty-four states, equal to the minimum penalty for murder in a further nine states, and greater than the minimum penalty for murder in the remaining seventeen states. *See infra* Appendix.

167. *See infra* Appendix.

a defendant who has intentionally killed will deserve a sentence in this lower range only if the killing was both partially excused and partially justified.

We can readily make sense of the cumulative mitigating effect of partial justification and partial excuse. A partial justification reduces the wrongfulness of an action, and a partial excuse reduces the degree of blame the actor deserves for the (less wrongful) conduct. Each of these reductions affects the amount of punishment the actor deserves. Consider once again the case of Parent. We have already contended that if Parent kills Villain calmly and deliberately, she has committed a lesser wrong and so deserves less punishment than if she did not have this reason for killing Villain. Now consider the case in which Parent sees Villain murder her child and kills Villain in a fit of extreme rage. We should surely say that Parent deserves less punishment in this case than in the case where Parent kills while in full control of her rational faculties.

This mitigation accumulation strikes us as a plausible way to view partial justification and partial excuse. Intuitively, it seems correct that, *ceteris paribus*, a partially justified killing in the heat of passion deserves less punishment than a partially justified killing that is coldly deliberate, and also deserves less punishment than an entirely unjustified killing committed in the heat of extreme, reason-clouding passion.

While Joshua Dressler has described this approach as “torturous,”¹⁶⁸ we think it quite natural. There is something quite commonsensical about the idea that an actor with both a partial excuse and a partial justification deserves some mitigation as a result of each. The results of this structure or reasoning conform to our intuitions about which intentional killings deserve greater mitigation than others—that is, about which intentional killings deserve enough mitigation to warrant the substantially lower range of penalties available for manslaughter. The dual requirements of provocation—heat of passion and adequate provocation—deny this lower penalty range both to the person who exacts cold-blooded revenge for a grievous wrong and the person who kills in genuine heat of passion triggered by a trivial slight. In each of these cases, some

168. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 439.

mitigation in sentencing is warranted, but not that associated with the lesser offense of manslaughter.

The better objection to a doctrine that limits provocation manslaughter to cases in which the defendant had some good reason to do as he did (but not, we emphasize again, “good reason” all things considered) and was also in an emotional state that substantially interfered with his ability to conform his conduct to the balance of reasons does not deny that partial justification and partial excuse can aggregate in the way we have just described. Rather, it questions why the criminal law should require that each type of mitigation be present instead of demanding only that some specified quantum of mitigation be satisfied, while allowing that that total might be reached by partially excusing considerations alone, partially justifying considerations alone, or an aggregation of the two.

We do not deny that partial excuses and partial justifications vary in degree, and that in some extreme cases either basis of mitigation alone would diminish the actor’s blameworthiness as much as, or even more than, the two forms of mitigation combined in a typical case of provocation manslaughter. To make this concrete, consider the Australian case of *Scriva*.¹⁶⁹ The defendant in that case saw his child seriously injured by an automobile driver.¹⁷⁰ In the heat of passion, the defendant attacked the driver.¹⁷¹ When a bystander intervened, the defendant intentionally stabbed him.¹⁷² Dressler argues that the *Scriva* defendant was “sufficiently enraged or otherwise overwrought” to deserve to be punished for manslaughter only.¹⁷³ We do not deny that a manslaughter-level sentence might be entirely appropriate on the facts of *Scriva*.

The short response to the objection, however, is that legal doctrine need not, and frequently does not, perfectly correspond to its underlying moral considerations.¹⁷⁴ Cases, perhaps including *Scriva*, where the requisite degree of mitigation could be realized as

169. R v. Scriva (No. 2) [1951] V.L.R. 298 (Austl.).

174. Although a commonplace, this point is overlooked with surprising frequency. For an exploration of some of the pitfalls of forgetting this simple point, see Mitchell N. Berman, *On the Moral Structure of White Collar Crime*, 5 OHIO ST. J. CRIM. L. 301, 315-27 (2007).

a result of only partial excuse (or of only partial justification) will be rare. In most cases when a defendant is sufficiently enraged to warrant a manslaughter sentence, for example, he will also have some reason that partially justifies his actions. In the vast majority of cases in which the only mitigating condition is partial excuse, the defendant will not warrant a sentence in the manslaughter range. The combination of partial justification and partial excuse is a decent proxy for the level of mitigation that warrants such a lower sentence. It is therefore sensible for the law to require both, even at the expense of some underinclusiveness.

This is especially true because an alternative approach that would more perfectly track the moral analysis would incur real costs. To start, there is the formidable legal drafting problem of trying to articulate the total quantum of mitigation required to move from murder to manslaughter. Furthermore, allowing partial excuse alone to suffice for manslaughter runs the opposite risk of allowing partially excused intentional killers to be punished too lightly. We have in mind cases such as *Commonwealth v. Carr*,¹⁷⁵ killings in response to homosexual advance,¹⁷⁶ and the multitude of cases of intimate homicide in which the victim has done little or nothing to provoke the attack.¹⁷⁷ Indeed, we suggest that the tendency for provocation arguments to succeed in such cases is partly caused by placing too much emphasis on the partial excuse dimension of provocation at the expense of the requirement of partial justification. As a result, there has been a trend toward the partial loss of self-control aspect of provocation overshadowing the requirement of adequate provocation. The Model Penal Code is part of this trend, with the partial justification aspect of the provocation defense minimized—if not eliminated—in its EMED incarnation. As Victoria Nourse has effectively demonstrated, this change has resulted in the EMED defense being more often successfully argued in undeserving cases of intimate violence than its common law predecessor.¹⁷⁸

178. See Nourse, *supra* note 11, at 1355-56.

2. *The Expressive-Deterrent Account*

Another rationale for the conjunction requirement views each element of provocation as necessary, but not simply because they combine to provide a sufficient magnitude of mitigation. On this approach, heat of passion and adequate provocation are both necessary, but for different reasons. Adequate provocation is required for expressive reasons, whereas heat of passion is required principally for deterrence.

This perspective emphasizes—and helps to explain—an element of the provocation defense to which we have paid relatively little attention until now. Provocation is a *partial defense*: it does not merely provide for sentencing mitigation, nor even result in a lesser degree of murder. It does not simply support a range of punishment with lower maximums and minimums. The provocation doctrine carves out a separate offense—voluntary manslaughter—for expressive reasons. Sentence aside, a murder conviction expresses a greater degree of moral condemnation than a conviction for manslaughter.¹⁷⁹

It is plausible to think that *manslaughter* is meant to mark conduct that is different in kind from murder.¹⁸⁰ A defendant who intentionally kills with great partial excuse but without good reason—that is, without adequate provocation—might deserve significantly reduced punishment. But that is because he is *less to blame* for an act that is no less wrongful than a paradigm murder. His intentional killing is not a different type of—that is, a less wrongful—act. His partially excusing condition does not alter the quality of his act, just the degree to which he is to blame for it. By imposing the stigma of “murder” on a partially excused intentional killing, the law maintains its maximum expressive condemnation of the *act* of intentionally killing (without substantial supporting reasons), while the mitigation the defendant deserves is provided by

179. A murder conviction with a sentence of twenty years, for instance, expresses greater moral condemnation than a conviction for manslaughter with a twenty-year sentence. For a discussion of the expressive function of law, see generally Joel Feinberg, *The Expressive Function of Punishment*, in *DOING AND DESERVING: ESSAYS IN THE THEORY OF RESPONSIBILITY* 95 (1970).

180. This is consistent with the historical narrative Jeremy Horder presents. See *supra* Part I.A, note 13.

imposing a sentence at the very low end of the range available for murder.¹⁸¹ By providing a different offense category that carries less stigma—that communicates a lesser degree of condemnation—when the defendant is adequately provoked, the law communicates that the relevant conduct itself is *less wrongful*.

But if the category of manslaughter corresponds to less wrongful killings, and less wrongfulness is established by the existence of adequate provocation, then why does the provocation defense also require that the killing occur in the heat of passion? The answer to this question draws out the asymmetry of this approach. Heat of passion is required for different reasons than adequate provocation. While the latter is required for expressive reasons, the former is required principally for reasons of deterrence. A lesser offense of manslaughter with only the requirement of adequate provocation runs the risk of incentivizing retaliatory killing. A person who has been grievously wronged may make the cold cost-benefit calculation that a manslaughter conviction (and the accompanying lesser punishment) is a price he is willing to pay in order to exact vengeance on his wrongdoer.

The case of Ellie Nesler provides a telling illustration. Nesler fatally shot the man accused of molesting her son while the man sat in a California court.¹⁸² The California judge in her trial found that “she had known the penalty for manslaughter before she killed [the victim] and had been prepared to accept it.”¹⁸³ Such reasoning is far less likely if a partial justification, by itself, is relevant only to mitigate a sentence for murder. Even if the minimum sentence is as low as, or lower than, the maximum for manslaughter, a wronged

181. This reasoning suggests that the ideal sentencing scheme for homicide would have some overlap between murder and manslaughter. That is, ideally the minimum sentence available for murder should be equal to or slightly lower than the maximum sentence available for manslaughter because some defendants with a partial excuse of great magnitude deserve a sentence in the manslaughter range, but for expressive reasons, should be convicted of murder. This framework is perhaps the best way to think of cases like *Scriva*: such defendants should have their actions branded as murder, but deserve a sentence in the high end of the manslaughter range. Twenty-six states use this model. In nine states, the sentencing range for manslaughter is contiguous with the sentencing range for murder—that is, the manslaughter maximum is the same as the murder minimum. In seventeen other states, there is overlap between the manslaughter and murder ranges, with the manslaughter maximum higher than the murder minimum. *See infra* Appendix.

182. *Mother in Courtroom Slaying Calls Jail Term Fair*, N.Y. TIMES, Jan. 9, 1994, at L20.

183. *Id.*

person contemplating killing in retaliation could not guarantee that he will receive a sentence at the low end of the murder range. The applicable punishment therefore remains a punishment for wrongful conduct, rather than merely the price of acting in a certain way. Restricting manslaughter to situations in which both partial excuse and partial justification apply ensures that those who are unable to convince a factfinder that they killed in the heat of passion will not have their possible punishment capped at the maximum sentence available for manslaughter, and therefore would risk a substantially greater punishment.¹⁸⁴

To restate this latter point, the criminal justice system is, in its fundamental self-conception, a system of sanctions, not prices. In other words, it is a system that threatens and imposes penalties for prohibited conduct, rather than exacting charges for permitted conduct.¹⁸⁵ While it is true that the system's addressees sometimes treat the threatened sanctions as mere prices (this is a problem that bedevils corporate criminal law, for example), that is an inversion that the penal department of the legal system cannot condone. The limitation of manslaughter, with its reduced maximum penalties and its less condemnatory expressive force, to cases in which provoked killers act in the heat of passion and not as a result of a cool cost-benefit calculation, is necessary to help maintain the integrity of criminal law as a prohibitory and condemnatory system of social control.

IV. OBJECTIONS AND ELABORATION

The partial excuse aspect of our account reflects common wisdom about provocation manslaughter. The novelty of our account concerns the role we assign to what we call partial justification. We

184. A risk remains that a wronged person might believe he could convince a court that he acted in the heat of passion and therefore conduct his cost-benefit analysis on this basis. But there are doctrinal protections against this risk. For example, one of the elements that falls under the heat of passion requirement is the rule in most states that there must not have been a lapse in time sufficient to give the defendant reasonable time to cool down. This element is best understood as an evidentiary rule that, while it may exclude some genuine claims of heat of passion, is justified by the extent to which it guards against false claims of heat of passion.

185. For the classic discussion of the distinction, see generally Robert Cooter, *Prices and Sanctions*, 84 COLUM. L. REV. 1523 (1984).

expect, therefore, that most objections to our account will target that aspect of our theory. In this Part, we consider three potential objections: first, that justifications and excuses are mutually exclusive and therefore cannot be combined in the fashion we propose; second, that the notion of partial justification is incoherent or misguided; and third, that to kill someone intentionally, even in the face of extraordinary provocation, is not less wrongful than to kill someone intentionally absent such provocation.

To each of these three objections we offer a different type of response. The mutual exclusivity objection, we argue, is just plain mistaken. There are no good reasons to doubt that a doctrine of the criminal law can combine elements of both justification and excuse. Somewhat more can be said to support resistance to the concept of partial justification. Nonetheless, we will argue that there are good reasons to favor it. More importantly, though, we also explain that absolutely nothing of substance about our account would be lost were that particular nomenclature abandoned. The substance and originality of our account are fully preserved if the notion of “lesser wrongfulness” is substituted for that of “partial justification.” Finally, in support of our contention that the adequately provoked killing is less wrongful than it would be absent the provocation, *ceteris paribus*, we offer something in the spirit of what Robert Nozick termed a “philosophical explanation.”¹⁸⁶ That is, we do not present an argument that purports to establish decisively that such a killing *is* less wrongful. Rather, we give an explanation of how such a killing could be less wrongful.

In other words, we set out what propositions about the nature of wrongfulness and about the reasons for killing under provocation could be true that would vindicate our claim. We anticipate that many readers (most, we hope) will find this explanation congenial and probable. But we offer no arguments to bludgeon into acceptance those who do not. Instead, we suggest, such readers have reason to reject the standard provocation manslaughter doctrine, either by scrapping it altogether or replacing it with rules that are better understood purely in the nature of partial excuse, like the Model Penal Code’s EMED doctrine broadly understood and applied.

186. ROBERT NOZICK, PHILOSOPHICAL EXPLANATIONS 8-11 (1981).

Part IV.D highlights additional aspects or implications of our account that warrant explicit attention.

A. Partial Justifications and Partial Excuses Are Not Mutually Exclusive

Despite the appearance of both partial-justification- and partial-excuse-related criteria in the doctrine of provocation, criminal law scholars have overwhelmingly been reluctant to treat provocation as a combination of partial justification and partial excuse.¹⁸⁷ Many considerations contribute to this reluctance, but the single factor with greatest explanatory force is the widespread belief that justification and excuse are mutually exclusive. As Doug Husak recently declared, “criminal law theorists believe—with almost no exception—that justifications are” incompatible with excuses.¹⁸⁸ Notice that this is a claim about the compatibility of *complete* justification and *complete* excuse, not about the compatibility of *partial* justification and *partial* excuse. A great deal of mistaken thinking about provocation has flowed from insufficient attention being paid to the difference between the claim that the *complete* defenses are mutually exclusive and the claim that the *partial* defenses are mutually exclusive. Only the latter claim is incompatible with our account of provocation as a combination of partial justification and partial excuse. But, perhaps due to a failure to fully appreciate the consequences of the move from complete to partial defenses, the bulk of provocation theorists simply cite the claim that complete excuse and complete justification are incompatible as the reason why provocation cannot be explained by a combination of partial excuse and partial justification.¹⁸⁹ That is, the

187. See *supra* notes 7-11 and accompanying text.

188. Husak, *Justification to Excuse*, *supra* note 165, at 561.

189. See, e.g., Fontaine, *supra* note 8, at 41-42 (declaring that a long series of cases “reflect a longstanding rationale as to the excusatory nature of the [heat of passion] doctrine”); Nourse, *supra* note 11, at 1394 (“Traditionally, ‘excuse’ and ‘justification’ have been viewed as mutually exclusive categories: A defendant cannot be both excused and justified because an excused action presupposes that the action was wrong and therefore unjustified.”). Both Fontaine and Nourse cite Dressler as authority for the view that the mutual exclusivity of justification and excuse precludes a combined theory of provocation. Dressler claimed: “It must be remembered that ordinarily a defense cannot be properly viewed simultaneously as a justification and an excuse because the latter, by definition, admits to the existence of social harm.” Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 438. Note that Dressler claims

mutual exclusivity of *partial* justification and *partial* excuse is treated as synonymous with, or at least entailed by, the mutual exclusivity of complete justification and complete excuse. As it happens, there are good reasons to be skeptical even of the widespread belief that complete justification and complete excuse are incompatible.¹⁹⁰ But even if we assume *arguendo* that complete excuse and complete justification are mutually exclusive, it is not the case that the *partial* defenses are mutually exclusive. The considerations on which the incompatibility of the complete excuses are founded simply do not apply to partial defenses.

Complete excuse and justification are considered mutually exclusive because the existence of wrongdoing is taken to be a necessary component of excuse and justification entails that no wrong has been done.¹⁹¹ Mutual exclusivity is routinely written into the definitions of justification and excuse.¹⁹² J.L. Austin, who started the whole Sisyphean ball rolling, stated that to claim a justification is to “accept responsibility but deny that it was bad.”¹⁹³ To plead an excuse is to “admit that it was bad but ... [not to] accept ... responsibility.”¹⁹⁴ The phalanx of scholars that has since addressed the issue have followed Austin’s lead, at least to the extent of uniformly defining excuses as admitting that there was wrongful conduct (as variously conceptualized) but denying responsibility.¹⁹⁵ Dressler speaks for the general view, then, in his oft-cited passage framing the mutual exclusivity of justification and excuse as a *definitional* matter: “It must be remembered that ordinarily a defense cannot be properly viewed simultaneously as a justification and an excuse

only that complete justification and excuse are mutually exclusive. In the next sentence—not regularly quoted by later scholars—Dressler admits: “It is possible, though not easy, to imagine a dual rationalization of a *partial* defense which is both justification and excuse based.” *Id.* Greenawalt, by contrast, claims that the *partial* versions of justification and excuse are mutually exclusive. Greenawalt, *supra* note 74, at 96.

190. Husak, *Justification to Excuse*, *supra* note 165, at 580-83 (arguing that justification does not have “priority” over excuse, on grounds that entail the compatibility of justification and excuse).

191. See, e.g., Austin, *supra* note 8, at 20.

192. See Husak, *Justification to Excuse*, *supra* note 165, at 558-59 (citing five common definitions of justification and excuse).

193. Austin, *supra* note 8, at 20.

194. *Id.*

195. See Husak, *Justification to Excuse*, *supra* note 165, at 558-59 & nn.7-11.

because the latter, by *definition*, admits to the existence of social harm.”¹⁹⁶

But although fully justified conduct is *not* wrongful—or not criminal, or not warranted, or permissible, depending on your conception of justification—partially justified conduct *is wrongful*. It is less wrongful than the same conduct would be were the justifying condition not present, but it is still all-things-considered wrong. And because it is all-things-considered wrong, there is no contradiction involved in claiming either a partial or complete excuse in addition to a partial justification. This is because claiming a partial justification admits to the existence of a wrong, albeit a lesser wrong than in the absence of the partial justification.

Imperfect self-defense provides an example outside the realm of provocation. Suppose a person is confronted with an attack involving significant but nondeadly force, and responds in defense with unreasonable and disproportionate force, killing his attacker. This is plausibly understood as conduct that is partially justified.¹⁹⁷ Invoking our conception of partial justification, we would say that the defender had a reason to act as he did—to avoid being significantly harmed—but had weightier reasons not to act as he did. Put another way, the obligation not to kill outweighs his legitimate interest in protecting himself from harm substantially less than death. His conduct was not wholly warranted or justified, but it was partially justified. This accords with our intuitions that such conduct is wrongful homicide, but is of less gravity than a premeditated killing for financial gain.¹⁹⁸

Given the residual wrongfulness of partially justified conduct, there is no contradiction in also claiming an excuse, either partial or complete. Suppose our killer in excessive self-defense is insane. It is perfectly coherent for him to raise insanity as a *complete* excuse in order to avoid blame for the lesser or residual wrongfulness of his conduct. He would be fully excused in relation to this lesser wrong.

196. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 438 (emphasis added). Note that Dressler follows Robinson in equating the wrong in unjustified conduct as social harm. See Paul H. Robinson, *A Theory of Justification: Societal Harm as a Prerequisite for Criminal Liability*, 23 UCLA L. REV. 266, 272 (1975). We address this view in Part IV.B. See also *infra* note 237 and accompanying text.

197. See Rozelle, *supra* note 12, at 208-10.

198. *Id.* at 208-09.

A possible response at this juncture would be to point out that, if the defendant has a complete excuse, there is no need to claim a partial justification because the complete excuse will preclude liability even for a charge not ameliorated by the partial justification.¹⁹⁹ But this response is not available to deny combining partial justification with partial excuse. Imagine that our defendant who killed using excessive force in self-defense was beside himself with rage at the time: the violent but nondeadly attack occurred during an extremely heated argument. Let us assume that this rage did in fact interfere with his capacity to exercise self-control, which contributed to the excessiveness of his response. We now have both partially justifying and partially excusing conditions present. Though partially justified, his conduct was still wrong—but less wrong than had there been no attack at all. And though partially excused from blame for his wrongful conduct, he is still *partially* to blame for this wrongful conduct. It involves no contradiction to say that partial justification *reduces* the wrongfulness of the conduct, and also that partial excuse *reduces* the degree of blame for the (residual or comparatively lesser) conduct. As we argued in Part III.B, the mitigation associated with partial justification and partial excuse is *cumulative*.

As the concepts of partial excuse and justification are not inherently (or necessarily, or conceptually) incompatible, some further argument is required to justify dismissing out of hand a combined rationale for the provocation defense. We know of no such additional arguments other than those that reject the notion of partial justification—arguments to which we now turn.

B. Partial Justification Is a Coherent Notion

A common reason for rejecting a combined rationale for the provocation defense in favor of an excuse theory of provocation is the view that the notion of *partial* justification is either incoherent or morally repugnant. As such, partial justification can neither play a role in a combined rationale for provocation nor provide a rationale

199. Husak responds wryly to the argument from need: “We should not be too quick to conclude that persons cannot *have* a given kind of defense simply because they do not *need* one. I may *need* my umbrella only if it rains, but I *have* one nonetheless. Why can’t excuses be like umbrellas?” Husak, *Justification to Excuse*, *supra* note 165, at 568.

for provocation in its own right. The only remaining option, so this thinking goes, is that provocation is a partial excuse. Hence the result that partial excuse has become the dominant rationale for provocation.

The arguments for rejecting partial justification fall into two categories, with the second group consisting of two sub-categories. First, theorists have asserted that the *concept* of partial justification is incoherent. Second, the various *conceptions* of partial justification²⁰⁰ have been criticized as either (a) conceptually contradictory or (b) morally insupportable.

1. Partial Justification as a Contradiction in Terms

Many scholars have asserted that “partial justification” is a contradiction in terms.²⁰¹ Justification on this view is like a light switch: it is either on or off. Something is either justified or it is not. As justification is a binary concept, admitting of no degrees, it makes no sense to say that conduct is partially justified. Garvey provides a recent example of this position:

The concept of a “partial justification” is puzzling. A justified action is usually understood to mean an action one is (at least) permitted to do, and any particular action can be described as either permissible or impermissible. But it makes no sense to say a particular action is “partially permitted.” The logic of permission is all-or-nothing.²⁰²

Kent Greenawalt has expressed similar concerns: “The conceptual difficulty is that the term justification has an either-or quality that makes people hesitant to speak of a partial justification when no aspect of the action is fully justified.”²⁰³ The conceptual difficulty is overstated. To be sure, the term “justification”—*when unmodified*—has an either-or quality. This does not entail, however, that modi-

200. Husak, *Partial Defenses*, *supra* note 2, at 170 (distinguishing between “concepts” and “conceptions” of justification).

201. See, e.g., Garvey, *supra* note 47, at 1693 n.57; Greenawalt, *supra* note 74, at 92-93.

202. Garvey, *supra* note 47, at 1693 n.57. To be fair, Garvey seems to view this puzzle as merely one of nomenclature and therefore easily resolved by renaming partial justification theories as “lesser wrong theories.” *Id.* (emphasis omitted).

203. Greenawalt, *supra* note 74, at 92.

ying the term amounts to contradicting it. The unmodified terms “full” and “empty” have an either-or quality about them: to say a vessel is “full” is to declare it completely full; to say a vessel is “empty” is to declare it completely empty. The logic of fullness and emptiness, it seems, is quite literally all-or-nothing. Yet people are not at all hesitant to refer to a glass as either half full or half empty. Nor do we have any difficulty understanding what is meant by these phrases when they are uttered.²⁰⁴

The same point can be made regarding the term “wrong.” When wielded without modification, “wrong” has a binary connotation. But no one would deny that the concept of wrongfulness admits of degrees.²⁰⁵ Wrongful actions can be more and less wrongful.

2. *Uniacke and the Incoherence of Partial Justification*

At the risk of belaboring the point more than half to death, we ought to address directly the position of Suzanne Uniacke. She is the scholar most regularly cited as advocating the view that the concept of partial justification is incoherent,²⁰⁶ and her position on partial justification is both nuanced and interesting. Uniacke states: “I do not think that the concept of a partial justification *for a particular act or offence* makes sense.”²⁰⁷ At the same time, she admits that “justification can be a matter of degree.”²⁰⁸ How does Uniacke reconcile these two claims?

204. Of course, some terms cannot sensibly be modified in this way. It is not the case, for instance, that some animals are more equal than others.

205. See Husak, *Justification to Excuse*, *supra* note 165, at 580-82; Husak, *Partial Defenses*, *supra* note 2, at 171-72. The term “right” is a little more difficult. Although there is clearly a gradation of behavior ranging from barely permissible to deserving of approval to heroic, we do not normally describe these as more or less right, but we can certainly say that some morally (or legally) right acts are *better* or *more preferable* than others. Nonetheless, the asymmetry between “right” and “wrong” may explain Garvey’s hesitation in calling conduct “partially permitted.” Garvey, *supra* note 47, at 1639 n.57 (emphasis added). But as Garvey himself points out, whatever the linguistic hesitation, the notion of partial justification makes sense as making conduct less wrongful, but still impermissible. *Id.* at 1693. Notably, Garvey also uses the phrase “just as impermissible,” which adds an unnecessary layer of confusion, given he has just asserted that “[t]he logic of permission is all-or-nothing.” *Id.*

206. See, e.g., Garvey, *supra* note 47, at 1693 n.57; Husak, *Partial Defenses*, *supra* note 2, at 171 n.24.

207. Suzanne Uniacke, *What are Partial Excuses to Murder?*, in *PARTIAL EXCUSES TO MURDER* 1, 15 n.8 (Stanley Meng Heong Yeo ed., 1991).

208. UNIACKE, *supra* note 74, at 13; Uniacke, *supra* note 207, at 4, 10.

In Uniacke's view, when we choose between labeling an action "justified" or "unjustified," we make an overall evaluation of that act.²⁰⁹ If an act is justified, it can be more or less justified. That is, among the set of overall-justified acts, some are better—more justified—than others.²¹⁰ For example, one may be justified in repelling an unwanted kiss from a persistent would-be paramour by either pushing him away or slapping him on the cheek. But, if pushing him away will get the message across, this is *more* justified than slapping him.²¹¹

All unjustified acts, however, are simply that—unjustified. Uniacke's point seems to be that although justification can be a matter of degree, *un*justification cannot.²¹² Moreover, calling an act "partially justified," according to Uniacke, expresses the judgment that the act falls within the set of overall justified acts.²¹³ But acts to which the provocation defense applies are overall *un*justified. So, to call provoked killings partially justified is to contradict the law's overall assessment of such killings as wrong and deserving of serious punishment.²¹⁴

This is a plausible view of the linguistic implications of "justified" and "unjustified." However, it is not the only plausible view. It is also plausible to view "partially justified" as indicating that an act is supported by some good reasons, but not enough to make the act overall justified. Nonetheless, we feel no need to insist that our linguistic preferences should trump those of Uniacke and others. We believe the term "partially justified" is a particularly efficacious way of describing the moral status of provoked killings, but "less wrong" also suffices. Nothing of substance in our position turns on this

209. See UNIACKE, *supra* note 74, at 13-14; Uniacke, *supra* note 207, at 4. One of us has challenged this idea elsewhere, arguing instead that the demanding and giving of justifications display a dialectical structure, such that to label an act "justified"—fully, not partially—usually signifies only that it is not rendered impermissible by the particular considerations invoked, explicitly or implicitly, against it. Thus, one need not normally warrant that the act is all-things-considered permissible by deeming it "justified." See Mitchell N. Berman, *Punishment and Justification*, 118 *ETHICS* 258, 262-66 (2008). Our analysis of provocation does not depend on this "tailored" conception of justification.

210. UNIACKE, *supra* note 74, at 13 ("[S]omething can be arguably justified, barely justified, amply justified, etc.").

211. *Id.*

212. See *id.* at 13-14; see also Uniacke, *supra* note 207, at 15 n.8.

213. UNIACKE, *supra* note 74, at 13.

214. *Id.* at 13-14.

change in nomenclature, and nothing in Uniacke's approach denies that overall unjustified acts can be more or less wrong.

3. *Conceptions of Partial Justification*

The arguments we have just addressed purport to establish that the concept of partial justification is incoherent. We have shown that there are reasons to reject these arguments. But it is also worth noting that these arguments are primarily linguistic. Because of this, the thrust of the arguments is easily parried by simply replacing the term "partially justified" with "less wrongful." Nothing of substance is lost as a result of the change in nomenclature.

Another approach used to reject partial justification is to argue that the particular *conceptions* advanced to explain partial justification in the context of provocation cannot be supported. Dressler, the chief antagonist of provocation as partial justification, identifies three theories that have been advanced to explain partial justification: (1) the "rights theory"; (2) the "forfeiture theory"; and (3) the "lesser harm theory."²¹⁵ He argues that each of them fails—either because they are conceptually incoherent or because they are morally unacceptable.²¹⁶ Dressler approaches the task of identifying theories of partial justification by first isolating the theories that have been posited as explaining *full* justification and then considering when these theories are translated into partial defenses.

According to the rights theory, "it is sometimes morally justifiable to enforce a legal and moral right by taking the life of another."²¹⁷ This is at least plausible as a rationale for self-defense: you are entitled to enforce your right to life by taking the life of your attacker.²¹⁸ As a basis for partial justification, Dressler criticizes this theory on two counts. First, whatever right the provoked individual protects is less than the right to life, as *ex hypothesi* one's

215. Dressler, *Provocation*, *supra* note 9, at 477.

216. *Id.* Theories of partial justification are *moral* theories because they are theories about the degree of wrongfulness of actions.

217. *Id.*

218. Note that, stated in this form, the justification does not necessarily depend on wrongdoing by the person killed. Your right to life can be accidentally violated, for example, by a person who is sleepwalking or hypnotized. In killing an innocent attacker, you are nonetheless enforcing your right to life—or, more precisely, your negative right not to be killed.

life is not endangered by the provoking conduct (or else one could avail oneself of self-defense).²¹⁹ The provoked individual must be protecting some lesser right, in which case it is difficult to see why the provoked person is morally entitled to take another's life, and so violate a *greater* right. As Dressler puts it, "it should certainly come as a surprise to us that such a right entitles the actor to take a human life in order to enforce it."²²⁰

Dressler's second criticism is that, if the actor has a *right* that he is entitled to enforce by killing his provoker, we are left with a puzzle as to why provocation is a partial rather than a complete defense.²²¹ The same criticism has been leveled at the so-called partial-right doctrine of imperfect self-defense—namely, that to say someone has a partial right is a contradiction in terms.²²² Dressler therefore claims that, as a rationale for the partial defense of provocation, the "rights theory" is both a conceptual and moral failure.²²³

We feel no desire to defend the rights thesis. It suffices to point out that our theory of partial justification indeed denies that the adequately provoked person has the right to kill. He does not have such a right, which is why he is guilty of murder—or of manslaughter, if he is also partially excused. His wrongful conduct, in which he violates the right to life of his provocateur, is simply less wrongful than it would have been had he not been provided with *some* reasons to kill as a result of the provocation.²²⁴

Whereas the "rights theory" proposes that the killer has a right to kill, the "forfeiture theory" proposes that the victim *does not* have the right to life.²²⁵ The victim forfeits his life by choosing to engage in wrongful conduct, and so no wrong is done by killing him.²²⁶ In the context of provocation, the argument is that adequate provoca-

219. Dressler, *Provocation*, *supra* note 9, at 477 & n.51.

220. *Id.* at 477.

221. *Id.*

222. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 449 & n.229 (citing ROLLIN PERKINS, CRIMINAL LAW 1016-17 (2d ed. 1969)).

223. Dressler, *Provocation*, *supra* note 9, at 477.

224. Remember that the degree of mitigation to which the provoked killer is entitled, absent a partial excuse also applying, does not suffice to warrant a manslaughter conviction, but rather ought to be considered in sentencing.

225. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 454.

226. *Id.*

tion is a wrong, and often a legal wrong, that amounts to a forfeiture of the provoking agent's right not to be killed. The forfeiture theory, as a basis for *partial* justification, has a symmetrical conceptual problem to that encountered by the rights theory: it "should serve to make the defense complete ... not partial."²²⁷ Either the victim forfeited his right not to be killed, or he did not.²²⁸ It makes no sense to say that the provoking agent forfeited *part* of his right.

Once again, we need not argue this point with Dressler. Our theory of partial justification does not entail a claim that the defendant forfeits any part of his right. A person who kills in response to adequate provocation, even in the heat of passion, violates his victim's rights; his action is not all-things-considered justified. Our position is that the circumstances in which the violation of a right occurs can affect the moral gravity of that violation. One of the circumstances that affects the gravity of a right violation is the degree of intent. A premeditated killing is a greater wrong than a negligent killing, even though both acts violate the same right—the right not to be killed—and violate that right *to the same degree*, qua right. The negligently killed victim is just as dead as the intentionally killed victim. Another factor that affects the gravity of a right violation is a worthy motive, such as retaliation for the murder or sexual assault of a loved one. The provoking agent has not forfeited any rights, but the killer's violation of those rights, in response to the provoker's actions, is less grave than it would otherwise have been in the absence of the reasons provided by the provoker's conduct.

According to the "lesser harm" theory, killing a person who has done the killer a serious moral wrong involves less "social harm" than killing an innocent person.²²⁹ As the killing causes less harm, it is less wrong. For Dressler, this is the "basic" theory of justification: "The basic theory of justification is that *if an act is justified there has been no social harm*, or, at least, less social harm than if the actor did not act as he did."²³⁰

227. *Id.* at 456.

228. *Id.* at 455.

229. Dressler, *Provocation*, *supra* note 9, at 477. Dressler also refers to this theory as the "comparative moral wrongdoing" theory. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 545-55.

230. Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 450.

Unlike in response to the rights and forfeiture theories, Dressler does not assert that a partial defense on the lesser harm theory would involve a contradiction. Rather, he acknowledges that the theory is conceptually coherent²³¹ and even suggests that the theory has considerable intuitive force in explaining provocation.²³² Dressler rejects the lesser harm theory on the basis that it is morally unacceptable.²³³ A person's bad conduct should not make his life less valuable than that of an innocent person: "Are we to say that immoral conduct, albeit nonlife endangering, should make a person's life less deserving of society's protection? Such a position runs counter to most common law theories of criminal culpability."²³⁴

The moral dangers associated with suggesting the victim *deserved* to be killed have struck a chord with writers concerned that the provocation doctrine reinforces beliefs that members of some groups are less worthy than the mainstream. Hence, Susan Rozelle suggests that calling provocation a partial justification "smacks of 'blame the victim.'"²³⁵ Similarly, Robert Mison worries that framing provocation as a partial justification in cases of homosexual advance expresses the notion that the life of a homosexual man is worth less than that of a heterosexual man.²³⁶

Once again, the appropriate response to this argument is to point out that the lesser harm theory is merely one conception of partial justification. A theory of partial justification does not *necessarily* entail the view that the victim's life is less valued or is a lesser social harm. It may be that, *ceteris paribus*, if conduct causes less harm, then the conduct is less wrongful. But it does not follow that if conduct is less wrongful, then it must have caused less harm. Accidental killing is less wrongful than intentional killing, but the harm is the same.²³⁷ The victim of an accidental killing is neither

231. *Id.* at 457.

232. *Id.* at 456.

233. *Id.* at 458.

234. *Id.*

235. Rozelle, *supra* note 12, at 215.

236. Mison, *supra* note 7, at 172.

237. Dressler might respond that the "social harms" in each case are different, as the intent of the wrongdoer is somehow a component of the harm caused to society. *Cf.* Dressler, *Rethinking Heat of Passion*, *supra* note 41, at 435-36. But on this copious conception of "social harm," the amount of social harm is not a measure of the worth of the victim. Treating a

less valuable, nor more deserving of death, than the victim of an intentional homicide.

The harm that an actor intends or anticipates is certainly an important factor in determining the degree of wrongfulness of that conduct. But it is not the only factor. One of the other contributing factors is the set of reasons on which conduct is based. Once again, the arguments Dressler marshals against this particular theory of partial justification do not apply to our conception of partial justification.

In summary, first, none of the arguments so far advanced demonstrate that the *concept* of partial justification is incoherent. Second, none of the arguments that particular *conceptions* of partial justification are either incoherent or morally unacceptable apply to the theory of partial justification on which we rely, that of partially warranting reasons. Third, no one appears to have even attempted to critique this theory as it applies to partial justification. Therefore, no sufficient argument has been advanced to support the view that partial justification cannot form part of the rationale of the provocation defense.

C. Provocation Does Not Render an Intentional Killing Less Wrongful

As we observed above, wrongfulness is a scalar, not merely a binary, property. We take this to be common ground. Nobody, say, who believes that shoplifting or hurling a gratuitous insult is wrongful believes that either act is as wrongful as rape or murder. Nobody believes that pickpocketing is as wrongful as genocide. Importantly, nothing that we have said or contemplated in Part III.B is to the contrary. Rejection of the concept of partial justification, as we previously explained, rests on the idea that conduct is either wrongful or not, and that justified conduct is not wrongful.²³⁸

provoked killing as less harmful is not to treat the victim as less valuable, any more than treating an accidental killing as less harmful is to treat the victim of an accident as less valuable than the victim of a homicide.

238. This is the dominant view. Some theorists believe, in contrast, that a justification qualifies wrongdoing but does not eliminate it, thus creating three categories rather than two: wrongful and unjustified, wrongful but justified, and not wrongful. See Berman, *Justification and Excuse*, *supra* note 2, at 7 n.11.

But this idea does not entail the proposition that wrongfulness does not admit of degrees. Nor does it insist that each wrongful act is precisely as wrongful as every other wrongful act. So we will accept as a given that, within the universe of wrongful conduct, particular acts can be more or less wrongful than others.

Against this background premise, to establish fully that provoked intentional killings can be less wrongful, in virtue of the provocation, than unprovoked intentional killings, we need to do two things. First, we need to provide and defend a general theoretical account of the determinants of the degree of wrongfulness of wrongful conduct. Second, we need to provide a specific account of how killing in response to provocation satisfies the criteria made relevant by our general account. That is a very tall order indeed, for this first step would require that we detail and defend something close to a full moral theory, or a full account of practical reasoning. Accordingly, we cannot tackle in this Article the daunting task of establishing that the lesser wrongfulness thesis is true across diverse moral theories.²³⁹

Instead, our plan of attack in this Section is to sketch the rudiments of a general account of wrongfulness and to offer reasons, consistent with that general account, to believe that an intentional killing is less wrongful when done in response to adequate provocation.²⁴⁰ We will then consider objections to this account—objections that must themselves be consistent with the thesis that wrongfulness has variable magnitude or weight—and explain why we find them unpersuasive. If this leaves us some distance short of having proven that intentional homicide is less wrongful when responsive to adequate provocation, it should nonetheless establish why one might reasonably think so, and thus might well *explain* the provocation doctrine even if it does not, as we believe it does, *defend* it.

239. Consider, to begin with, that consequentialist and nonconsequentialist moral theories are committed to different positions regarding the considerations (1) in virtue of which conduct is wrongful, and (2) that determine the magnitude of a wrong. Likewise, different theories within each of these two broad ethical families are apt to supply different answers.

240. We will not try to demarcate the contours of the class of adequate provocations, contenting ourselves in this Section to argue that it is a nonnull set.

1. *Affirmative Account*

Let us start with some remarks about wrongful conduct or wrongdoing (terms that we will treat as synonymous) that, although not uncontroversial in all particulars, are well within orthodox thinking. Morality is concerned with guiding behavior and providing the basis for a certain type of criticism. Moral reasons are the subset of all reasons that concern the regard we ought to pay the interests of others—a principle that T.M. Scanlon calls “what we owe to each other.”²⁴¹ One ought to act in accordance with the balance of nonexcluded reasons. (In the Razian account of practical reason, the broad outlines of which we follow here, exclusionary reasons are second-order reasons not to act on certain first-order reasons. So, for example, the fact that *A* has promised to attend *B*’s party on Saturday night excludes or preempts, and does not merely outweigh, some of what would otherwise be perfectly acceptable reasons for *A* to pursue activities on Saturday night that are incompatible with his attendance at *B*’s party.)²⁴² One acts wrongfully if he acts against the direction of applicable moral reasons that are not themselves outweighed or excluded by other applicable reasons, moral or otherwise.

The nature, character, and constituents of wrongdoing are, of course, central concerns of moral philosophy. Moral philosophers have paid less attention, however, to questions regarding the magnitudes of wrongdoings. (Perhaps this should not be a surprise: if moral reasoning directs that Φ would be wrong, then it ought not be done, and the separate questions of *how* wrong it is, and therefore *how much* it ought not be done, might strike some as rather beside the point.) But insofar as wrongful action itself is in some

241. T.M. SCANLON, WHAT WE OWE TO EACH OTHER 6-7 (3d prtg. 1999).

242. One of us has suggested elsewhere that this model should be revised to distinguish between wrongdoing and ought-to-be-doneness on something like the following lines. What morally ought to be done is what the balance of nonexcluded moral reasons directs. And what morality commands of us is that we try to determine what the balance of nonexcluded moral reasons directs, and then that we act in conformity with the conclusion we reach at this first, deliberative stage. Thus, if we reach a sincere but erroneous judgment that what ought to be done in a given case is Φ , and then do Φ , we do not act wrongfully even though we fail to act in accordance with what the balance of nonexcluded moral reasons direct. See generally Berman, *Blackmail*, *supra* note 139. For simplicity of analysis, we ignore this refinement in our discussion in the text. We believe, however, that the simpler analysis we provide could be revised to accommodate complications or nuances of the foregoing sort.

sense the upshot or consequence of a balancing of reasons, it seems plausible to suppose that the magnitude of wrongdoing is a function of the extent to which the nonexcluded moral reasons against it outweigh or outdistance the nonexcluded reasons in its favor.

Take again the case of promising. Suppose that *A* stays home Saturday night because his child is ill. Caring for an ill child, we suppose, is a reason not to attend the party that the promise does not exclude. But that does not necessarily mean that staying home is morally permissible all things considered or even that it is morally permissible against the moral reasons created by the fact of his promise. If, say, the child's illness is minor and another responsible adult is available to care for her, then the reason for *A* to keep his promise might render his decision to stay home wrongful. Nonetheless, because he does have a good reason to stay home, his staying home is less wrongful than it would have been had he stayed home to watch a television program he enjoys or merely because he felt unsociable.

If that sketch of the nature and magnitude of wrongdoing is fundamentally correct, then it remains only to determine whether there exist types of wrongdoing in which an actor might engage that would give another person reason(s) to kill her, and which reason(s) are insufficient to prevent the killing from being wrongful but sufficient to reduce its wrongfulness by an amount that would warrant recognition from the legal system. We believe that an affirmative answer is exemplified by Villain's intentional killing of Parent's child. In a case such as this, we think that, ordinarily, Parent has such reason to kill Villain.

That this is so might emerge more clearly if we first assume something approximating the state of nature, or at least a state with a notably ineffectual criminal justice apparatus. Here, most of the reasons customarily invoked to justify state punishment—and capital punishment in particular—seem to provide reasons for Parent to kill Villain: for example, to give Villain what he deserves (for those who believe that one deserves to suffer, or to be punished, on account of his blameworthy wrongdoing); to prevent Villain from victimizing other innocent persons; to deter similar acts of aggression by others; and to express the appropriate degree of moral outrage toward Villain's actions, an outrage that, punishment skeptics notwithstanding, might be hard to express in nonpallid form

through other means. Furthermore, Parent has a special agent-relative reason to be the author of Villain's punishment, either to satisfy an obligation of loyalty owed to Villain's victim or to avenge the wrong done to Parent himself, albeit derivatively. To be sure, we do not expect all readers or all citizens to agree that each of these considerations underwrites a reason for Parent to kill Villain. But we do expect most readers to recognize at least some of these as valid reasons of nontrivial, perhaps substantial, weight.²⁴³

No doubt things are different when we introduce a working state with a reasonably effective, if imperfect, system of criminal justice. In general, the existence of the state likely strengthens some of the preexisting reasons, and adds new ones, for Parent not to kill Villain. For example, there is a greatly increased likelihood that retributive, deterrent, and incapacitative objectives will be served even if Parent stays her hand. Additionally, the social costs of private vengeance are greater if public order is already reasonably well maintained. So regardless of whether it would have been wrongful for Parent to kill Villain in the absence of an effective centralized enforcement system, it seems rather clearly wrongful under contemporary, developed conditions.

But we would caution against exaggerating the extent to which the existence of a moderately effective state changes the moral terrain as it bears on the present question. The state's existence provides some new moral reasons for Parent not to kill Villain and adds weight to preexisting reasons not to kill.²⁴⁴ It might also displace or eliminate some reasons that would lend support to Parent killing Villain. However, we think it implausible that the presence of the state extinguishes or even excludes all the reasons that Parent would have had, absent the state, to kill Villain. For one thing, law enforcement is far from perfect. Parent might reasonably believe,

243. The case in favor of Parent's lesser wrongdoing is likely to be strengthened if, as suggested earlier, *see supra* note 242 and accompanying text, the moral command is *not* "to act in accordance with the balance of (nonexcluded) reasons," but (to a first approximation) "to reason sincerely and sensitively about what the balance of reasons demands, and then to act in accordance with the conclusion that one has reached." Berman, *Blackmail*, *supra* note 139.

244. Of course, it also adds legal reasons not to kill. But to avoid circularity (we are, after all, trying to make sense of the way that a legal rule might be responsive to the moral status of one's actions), we must here be concerned with the moral reasons that bear on Parent's situation and not the legal reasons except insofar as the latter help shape the former.

and it might well be the case, that if she does not herself act, Villain has a good chance of escaping capture, conviction, or punishment. If so, Parent's retributive and incapacitative reasons to kill that we previously invoked would be preserved, if to attenuated degrees.

Furthermore, any agent-relative reasons Parent might have to act against Villain are likely to be similarly preserved despite the existence of the state. Consider Stranger, who, like Parent, reasonably believes Villain is unlikely to be caught or punished. Both Parent and Stranger have (attenuated) reasons of incapacitation and retribution that lend support to either of them killing Villain. But Parent has reasons for killing Villain that Stranger does not share: to fulfill a duty of loyalty to Parent's child, or to avenge a wrong done to Parent himself, and so on. If Parent reasonably, and perhaps rightly, believes that Villain would escape punishment by the state, not only are there reasons for Parent to want Villain killed, but there are also reasons for Parent, and not Stranger, to do the killing. In sum, then, although the existence of an effective state surely affects the moral calculus, it is far from wholly transformative. If Parent would have reasons to kill Villain sufficient to render his killing less wrongful in the absence of an effective state, such reasons likely exist—in weakened form—even in the world as we know it.

2. Challenges

The first possible challenge to this argument would reject our general account of the determinants of the magnitude of wrongdoing. On the competing view we have in mind, the degree to which a wrongful action is wrongful is a function entirely of the wrongmaking reasons and not at all a function of the delta—that is, the difference—between the wrongmaking reasons and the putatively justifying ones. For example, homicide is more wrongful than vandalism just because the reasons against killing a person are stronger than the reasons against destroying somebody's property. Reasons that tend in favor of an action need not be considered at all if they are insufficient to render it permissible.

This alternative view is highly implausible. It seems plainly wrong if we assume a consequentialist moral framework in which the right is a function of the good and the good is determined

entirely by aggregating states of affairs. But this alternative view seems arbitrary and unmotivated even on nonconsequentialist assumptions. Consider Slow Swimmer and Fast Swimmer, shipwrecked and swimming for a plank that can accommodate only one. If Fast Swimmer reaches the plank first, or looks poised to reach it first, and Slow Swimmer shoves him aside, Slow Swimmer acts wrongfully on most moral views.²⁴⁵ But now consider Boater, floating by in a skiff, who pushes Fast Swimmer off the plank because he wants the wood to make picture frames and planters that he will sell at flea markets. We contend that Boater is not merely more blameworthy than Slow Swimmer, but also that his action is more wrongful. In these paired cases, however, the reasons against the action are constant—namely, whatever reasons weigh against knowingly causing the death of another human being. What distinguish the cases are the reasons for which Slow Swimmer and Boater act. If Slow Swimmer's act is less wrongful, that lends substantial support for our claim that reasons that fall short of rendering putatively wrongful action justified can nonetheless render it less wrongful.

The remaining challenges accept, at least *arguendo*, our general account of degrees of wrongfulness—namely, that, perhaps loosely speaking, magnitude of wrongdoing is a function of the delta between wrongmaking and supportive reasons for action. But these challenges deny that any sort of provocation is adequate to supply an actor with reason(s) of a sufficient character and force to nontrivially reduce the wrongfulness of an intentional killing. First, one could object that none of the putative reasons we invoked above, or any others, are in fact good reasons to intentionally cause another's death. Second, one could contend that, insofar as they are good reasons, or would be under certain assumptions, they are reasons that the provoker's right to life excludes from consideration.

We have little to say in response to the first of these two objections. While we have already tried to present in a sympathetic light the reasons in favor of Parent's killing of Villain—reasons, it bears reiteration one last time, that are defeated by the reasons against

245. In Anglo-American law, Slow Swimmer would not be entitled to the justificatory defenses of self-defense or necessity. In most jurisdictions, he would not even be entitled to the excuse defense of duress of circumstances.

killing—we have also acknowledged that these claimed reasons may not have merit under all moral theories and theories of value. And we have further acknowledged that we do not present arguments sufficient to establish the case decisively if what we have said thus far does not resonate. We will add only this: Imagine you learn that *A*, an acquaintance, has killed *B*. In response to your query or criticism, *A* says: “I had a reason. *B* killed my child.” “Still,” you might say, “you ought not to have done it,” or “what you did was wrong.” The instant question is whether you would go so far as to assert: “But that’s no reason at all!” We expect that would be your response were *A* to have said: “I had a reason. I hate black people (or white people, or gay people, or tall people, or people who listen to opera).” That fact, you would say, might *explain* the killing but is no *reason* for it. If you would find such a response appropriate in some cases but not in the case of Parent and Villain, we suspect that is because you recognize that the fact that Villain killed Parent’s child, while not itself precisely a reason for Parent to kill Villain, does support such reasons and is therefore telegraphic of them.

The second objection is slightly different. It allows that Parent has reasons to kill Villain—perhaps reasons captured by the retributive, deterrent, incapacitative, and agent-relative considerations to which we have already alluded—but claims that such reasons count among those that Villain’s right to life specifically excludes. The “right to life,” the argument might go, captures what Raz calls a “protected reason”—a first-order reason not to cause death backed or reinforced by a second-order reason not to act on various first-order reasons that might come into conflict with the possessor’s interests in life.²⁴⁶ The reasons that would otherwise support Parent’s actions are excluded by the second-order reason. But reasons grounded in promoting or protecting the lives of others are *not* excluded. This is why Slow Swimmer’s killing of Fast Swimmer is less wrongful than would be Boater’s killing of Fast Swimmer: the reasons supporting Slow Swimmer’s action are precisely among those that Fast Swimmer’s right to life does not exclude.

246. See generally JOSEPH RAZ, BETWEEN AUTHORITY AND INTERPRETATION 216-19 (2009) (discussing the interrelatedness of reasons for action).

Possibly. Indeed, an argument that does not deny *tout court* that the reasons Parent would invoke in support of his killing of Villain are good reasons, but seeks instead to show why they are excluded from our practical reasoning by the reasons that render killing wrongful in the first place, strikes us as the most promising potential line of attack against our thesis. At present, though, we are not persuaded. First, some of Parent's reasons for killing Villain—those that sound in deterring evildoers like him and in preventing Villain himself from harming other innocents—would seem, on this competing account, *not* to be excluded from the set of reasons that determine right conduct. Furthermore, vastly more argument is needed to establish just what sorts of reasons are excluded by the protected reason that corresponds to an individual's supposed right to life. Equally or more plausibly, it seems to us, the excluded reasons are limited to more quotidian reasons for action, such as promoting the actor's own pleasure and convenience or ordinary welfare. That agent-relative reasons to avenge a grievous wrong—reasons that might themselves plausibly be conceived as obligations of a sort—are also excluded requires sustained argument, we think, and cannot be merely asserted.

Those who argue that provoked killing is not less wrongful than a paradigmatic murder bear the argumentative burden for another reason as well. The case of Parent killing Villain establishes the intuitive—or perhaps *prima facie*—appeal of the claim that an intentional killing provoked by a grievous wrong can be less wrong than a typical murder. Those who reject our account of lesser wrongs must either contend that Parent's conduct is just as wrong as that of the typical murder, or provide an alternative explanation for why it is less wrong.

A final challenge, like the previous two, accepts our general account of degrees of wrongdoing, but questions whether the requirement that the accused act in a heat of passion precludes our reliance on this account of wrongdoing. If the killer was too embroiled in anger to conform his behavior to the balance of reasons, the objection would run, then he might seem unable to draw moral credit, as it were, from the fact that reasons in fact existed to support, but not fully justify, his action. Put another way, the wrongfulness *vel non* of an action is not a function solely of the guiding or true reasons that obtain, but of whether they are

explanatory reasons too—that is, reasons that in fact explain why he acted. If this is so, then the particular marriage of partial excuse and partial justification that we seek to effectuate would be unworkable because the demands that the defendant have some good reason to do as he did and that he was too engulfed by passion to adhere to reason stand in a contradictory relationship.

This challenge evokes a debate in criminal law theory between proponents of “subjective” and “objective” theories of justification, especially in the context of what are often called “unknowing justifications.” Roughly, subjectivists about justification believe that whether an actor is justified depends only upon whether he nonculpably believed that facts existed that would support his violating a criminal prohibition, as by using force against another. Objectivists believe that the validity of a justification depends upon only whether the facts did in fact exist. The issue arises more commonly when an accused mistakenly believed that his life was endangered (or that some other sort of important interest was threatened). The “unknowing justification” variant arises when the converse is true: the actor is unaware of facts that would unproblematically support a justification were the actor to have been aware of them and to have acted, in some sense, because of them. An example is the accused who attacks a seemingly innocent and unthreatening person who, unbeknownst to the accused, was just about to attack the accused or some innocent third party.

We say that this challenge evokes the subjective/objective debate over justifications because the challenge would seem wholly to lack force against those who adhere to the fully “objective” theory of justification in which justification, full or partial, depends upon only the existence of guiding reasons. Be that as it may, we are not objectivists about justification. We agree that reasons that are grounded on facts of which the actor is unaware do not help to justify his action against the wrongmaking reasons of which he is aware.²⁴⁷ It may seem, then, that this final challenge should worry us.

It does not. In cases of provocation, the killer is only too aware of the most fundamental fact that gives birth to reasons to kill—

247. For arguments by one of us in support of that position, see Mitchell N. Berman, *Lesser Evils and Justification: A Less Close Look*, 24 *LAW & PHIL.* 681, 684-86 (2005).

namely, the wrong that his victim has done to him or someone close to him. Given his emotional state, the killer is not likely to have immediate access to all the reasons themselves—reasons that we have described by reference to the values of retribution, deterrence, and loyalty, among others. But unlike the paradigmatic putatively unknowingly justified actor, the provoked killer is aware of the underlying facts. It is just that, by hypothesis, he is not consciously advertent to the good reasons that correspond to, or are grounded on, those facts. We do not believe that the subjectivist component to the correct account of magnitude of wrongdoing properly requires that the actor consciously advert to the reasons that bear on the gravity of his wrongdoing in just the way that this objection contemplates. Rather, the reasons that serve to partially justify his action are available to him, for purposes of assessing the magnitude of his wrongdoing, provided that he is aware of the facts that underwrite those reasons and his awareness of those facts has the right sort of causal relationship to his action.

D. Final Observations

In this final Section, we develop four features of our analysis that the particularly attentive reader might have inferred from the discussion to this point, but that warrant more explicit emphasis, lest they be missed.

1. The Touchstone of Adequate Provocation

Existing provocation doctrine is mildly ambiguous regarding what the touchstone of adequate provocation is. Most statutory provisions and commentators require that the provocation be such as to cause a reasonable person to experience heat of passion.²⁴⁸ Others require

248. See, e.g., GA. CODE ANN. § 16-5-2 (West 1968) (provocation must be sufficient to incite “irresistible passion” in a reasonable person); 720 ILL. COMP. STAT. 5/9-2 (West 2010) (provocation must be “sufficient to excite an intense passion in a reasonable person”); LA. REV. STAT. ANN. § 14:31 (1973) (provocation must be “sufficient to deprive an average person of his self-control and cool reflection”). LaFave declares: “It is sometimes stated that, in order to reduce an intentional killing to voluntary manslaughter, the provocation involved must be such as to cause a reasonable man to kill.” LAFAVE, *supra* note 40, at 777. He further says that, “[l]anguage to this effect is to be found in many of the modern statutes.” *Id.* at 777 n.14. We have found no language in the statutes that refers to causing the reasonable man *to kill*.

that the provocation must be adequate to provoke a reasonable man to action.²⁴⁹

Our account decouples the provocation and heat of passion requirements. It would require that the defendant be in the heat of passion and that the provocation be of the sort that gives the defendant reasons to kill, subject to a substantial qualification discussed below. This requirement is at least as demanding as either variant of the orthodox test. It is hard to imagine the cases in which provocation would satisfy our standard yet not satisfy the orthodox one in either of its guises, but the converse is not true. It seems, at least, that ours is a significantly more demanding test than the common formulation of the test, namely, that a reasonable person would have experienced heat of passion. Many provocations might be adequate to cause an ordinary person to be enraged to a degree in which the power of self-control is greatly impeded, yet such provocations are inadequate to furnish a genuine reason to kill the provoker.

On our account, then, manslaughter should probably be available in a smaller class of cases than would be the case in jurisdictions that measure the adequacy of provocation by its tendency to cause anger in a reasonable person. But this would be so only when the nominal and actual sentencing range for murder is broad and in which the sentencing authority, whether judge or jury, is willing to grant the mitigation for murder that might often be due when loss of control is present, but a genuine reason to kill is absent. If intentional killers who do not qualify for manslaughter cannot realistically get the mitigation that is due to them, then a more expansive manslaughter regime is justifiable as a second-best solution. This follows from a point we have already tried to emphasize: the fact that an intentional killer should not be entitled to the partial

The closest are the statutes referred to above, which require that a reasonable man would have lost self-control or that the provocation would have been "irresistible."

249. Ashworth declares that the test of adequate provocation is "whether the provocation was 'enough to make a reasonable person do as [the accused] did.'" Ashworth, *supra* note 6, at 298. Ashworth does not provide a cite for the claim in quotation marks, but he is presumably referring to section 3 of the English Homicide Act, which provides: "Where on a charge of murder there is evidence on which the jury can find that the person charged was provoked ... to lose ... self-control, the question whether the provocation was enough to make a reasonable man do as he did shall be left to be determined by the jury." Homicide Act, 1957, 5 & 6 Eliz. 2, c. 11 § 3 (Eng.).

defense of manslaughter does not, on our account, entail that he does not have a sound claim to be punished less—even significantly less—than the paradigmatic or statistically ordinary murderer.

2. *Whether the Accused Must Have Reason “To Kill”*

In presenting our affirmative account, we exploited the example of a parent who kills the murderer of her child while in the heat of passion. We claimed that the parent in fact has reasons to kill. We contrasted this case with cases like *Carr* and *Raguseo*, in which the killer plainly lacked any such reason. Admittedly, these examples represent something close to the polar cases. More needs to be said about the intermediate case in which the provoked killer has ample reason to do something to his victim—let us say, not putting a very fine point on it, that he has reason to *retaliate* but may not have reason *to kill*. Consider Bully’s unprovoked beating of Ordinary Joe, an assault that causes massive bleeding and broken bones but leaves Ordinary Joe very much alive. If, after the assault is complete and without fear of additional attack, but while still subject to the heat of passion, Ordinary Joe stabs Bully in the back, killing him, would he be entitled to provocation mitigation on our analysis?

Perhaps this example is too thinly sketched to permit confident conclusions regarding whether Ordinary Joe had (some, albeit insufficient) reason to kill Bully, though we think he did not and expect that most readers would share that judgment. Whatever you might think about this particular case, we mean only to invite you to imagine a case in which you would believe that the killer had reason to retaliate or “to effect a punitive response” but *not* reason to kill. It might seem to follow that Ordinary Joe is not entitled to a manslaughter instruction on our account. But that does not necessarily follow. To understand why, we must attend more carefully than we have thus far to the act description *killing*.

Any bodily movement can be described under an innumerable number of distinct act descriptions. One given act might answer to all of the following descriptions: moving one’s index finger, firing a handgun, firing a Glock .45, shooting at a person, killing, murdering, assassinating the president, and so on. If I cause the death of a pedestrian by speeding when driving, my action was wrong, not because it is wrong to kill a person, but because it is wrong to drive

carelessly, or recklessly, or too fast. When I try to justify my conduct by invoking my reason to drive fast—say, I was rushing a gunshot victim to the hospital—the question is not whether that need justifies *killing someone*, but whether it justifies *driving fast (as fast as I had been driving)*. The appropriate act description, putting negligence aside, must be sensitive to what I took myself to be doing.

In the case of Parent and Villain, we have assumed that Parent acted with intent to kill and we have argued that Parent had reason to do just that. In contrast, we are assuming that Ordinary Joe lacked reason to try to kill Bully. But—and here is why manslaughter might nonetheless still be available to him—Ordinary Joe might not have had any such intent. Surely in some homicide cases in which a defendant hopes for a manslaughter conviction, his only intent was “to punish” the victim or “to teach him a lesson” or “to hurt him.” The balance of reasons model we have employed would seem to open up a sizeable space in which an actor has reason to act under a description like this even when he would not have reason to act under the description “to kill.” In some set of these cases, the accused would have reason to act under the description “to grievously harm” while lacking reason to act under the description “to kill.” Of course, under the common law and most current codes, the intent to cause grievous bodily harm counts as “malice” and supports a murder conviction when death results.²⁵⁰ There is some uncertainty regarding whether provocation manslaughter is available when the (provable) intent is to cause grievous bodily harm, but not to kill.²⁵¹ A negative answer to that question, we submit, is crazy. While it is a fallacy that the greater always or necessarily includes the lesser, it *usually* does—or should. When the defendant

250. See LAFAVE, *supra* note 40, at 737-39 (discussing the incorporation into American law of the rule that “one who intended to do serious bodily injury short of death, but who actually succeeded in killing, was guilty of murder in spite of his lack of an intent to kill”).

251. Some modern statutes include language that appears to define provocation as requiring an intent to kill. See, e.g., IND. CODE ANN. § 35-42-1-3 (West 1976) (provocation applies to a person who “knowingly or intentionally” kills); KAN. CRIM. CODE ANN. § 21-3403 (West 1976) (provocation applies to an “intentional killing of a human being”); MINN. STAT. § 609.20 (1963) (provocation applies to a person who “intentionally causes the death of another person in the heat of passion”). Courts have also often defined provocation “as if intent to kill were a required ingredient.” LAFAVE, *supra* note 40, at 776 & n.3. Despite the presence of this restrictive language, the great majority of jurisdictions allow a provocation defense in cases of intent to cause grievous bodily harm, but not to kill. *Id.*

did not intend to kill but only intended to cause grievous bodily harm, and when the defendant had reason to do the latter, but not to do the former, he should, on our analysis, be entitled to the partial defense of provocation²⁵²—assuming, of course, that the heat of passion prong is also satisfied.

3. *Whether the Provocation Must Cause the Passion*

One may argue that our theory of provocation cannot account for the requirement, under current provocation doctrine, of a causal link between adequate provocation and heat of passion.²⁵³ It is not enough, according to the doctrine, that adequate provocation and heat of passion each be present. For the defense to apply, the killer's heat of passion must be *caused by* the provoking conduct. But we can imagine a person who kills in response to adequate provocation, when the provoking conduct (while providing some reason to kill) does not bring about a debilitating emotion, yet the killer was nonetheless subject to such emotion from a separate cause, such as a recent family tragedy. Such a person would be convicted of murder under the current doctrine, but would be entitled to a manslaughter conviction under our theory, the requirement of a conjunction between partial justification and partial excuse having been satisfied.

We accept that provocation doctrine would therefore deny the defense in some circumstances in which the defense, in principle, is deserved. We nonetheless believe there are good reasons, consistent with our theory, to retain the causation requirement. The set of cases that would satisfy the conjunction requirement but fail the causation requirement, and hence the number of false negatives produced by the causation requirement, would be vanishingly small. Very few people would be emotionally unaffected by grave provocation that convinces them to kill, yet coincidentally be in the grip of genuinely debilitating emotion from an independent cause. The cost

252. Say that intentionally injuring (X) is a lesser-included offense of intentionally killing (Y). Now consider three possibilities regarding when Y is partially justified: (1) if there are some (but insufficient) reasons to Y; (2) if there are full and sufficient reasons to X, even if no reasons to Y; and (3) if there are some (but insufficient) reasons to X, and no reasons to Y. We have defended proposition (1). While we do not advocate proposition (2), our defense of (1) does not necessarily exclude (2)—an approach with affinities to those advanced by Greenawalt and Rozelle. See Greenawalt, *supra* note 74, at 96; Rozelle, *supra* note 12, at 255.

253. Thanks to David Enoch for making this point.

of abandoning the causation requirement, however, would be comparatively high: the danger of erroneous mitigations would increase substantially were defendants allowed to argue that their capacity for self-control was impaired by some other source. We therefore think it makes good practical sense for the doctrine to maintain the causation requirement.²⁵⁴

4. Why the Provocation Defense is Restricted to Homicide

As we noted in Part I.B, provocation is available as a partial defense only to murder. It is not a defense to other offenses. There are two reasons why such a defense—such as, say, a special lesser offense for provoked assault—is unnecessary. These two reasons correspond to the two accounts we give of the conjunction requirement, namely, the additive-proxy account and the expressive-deterrent account.²⁵⁵ First, the case for a special lesser offense gains force only when the available punishment range for the primary offense allows a significant likelihood that appropriate mitigation will not be delivered. This is the case for murder, both because the range is so large and because the minimum sentence available is so high that the sentence deserved by a provoked killer will not be available. This is not the case for other offenses. Second, the label “murderer” carries with it a uniquely grave expression of condemnation—more grave than a provoked killer deserves, hence the need for a separate, less condemnatory label of manslaughter. The same considerations do not apply to other offenses. The expressive effect of a conviction of assault is not so severe as to require the alternative of “provoked assault” to communicate the appropriate degree of disapproval. Because the requisite mitigation can be afforded in nonhomicide cases without creating a special lesser offense, it makes sense to restrict the provocation defense to those charged with murder.

²⁵⁴. Our view on this point is similar to our position on the “reasonable cooling off period” discussed *supra* note 56.

²⁵⁵. See *supra* Part III.B.

CONCLUSION

The search for an explanation for the provocation defense has become something of a *cause célèbre* among American criminal theorists over the last quarter century. The primary focus of this search has been the question of how provocation fits into the justification/excuse framework of criminal defenses. The orthodox view is that provocation is a partial excuse. While some adherents of partial excuse allow that the provoked killer's anger may be justified, they deny that the killing itself is even partially justified. One small camp of dissenting scholars argues that provocation is a partial justification. Another camp claims that provocation is best understood as neither a justification nor an excuse.

None of these rationales provide a convincing explanation for the central features of the provocation doctrine. Partial excuse theories can explain the heat of passion requirement, but struggle to explain the adequate provocation requirement. Partial justification theories have the opposite problem. We propose that provocation is best explained as a combination of the two: the defense is limited to intentional killings that are both partially excused and partially justified—or less wrong, which comes to the same thing. This theory provides a natural explanation for both the adequate provocation and heat of passion requirements. It also explains why the provocation defense results in a lesser offense—manslaughter—rather than merely a lower sentence.

We analyze partially justified actions as those supported by *some* unexcluded reasons, but not supported by the balance of unexcluded reasons bearing on that action. Scholars have traditionally resisted a combined partial justification/partial excuse rationale for provocation due to the long shadow cast by two claims: the mutual exclusivity thesis and the claim that partial justification is incoherent. We demonstrate that the mutual exclusivity thesis is wrong, at least as it pertains to partial excuse and partial justification. We suggest that skepticism of partial justification is overstated but point out that, in any event, such skepticism is negated by replacing “partial justification” with “less wrong.”

In sum, heat of passion and adequate provocation are necessary conditions of provocation because the defense is limited to intentional killings that are less wrong in virtue of the defendant's reason

for killing, and for which the defendant is partially excused in virtue of his being in the thrall of strong emotions that substantially impeded his ability to conform his conduct to what the balance of reasons required.

APPENDIX: SENTENCING RANGES FOR PROVOCATION
MANSLAUGHTER AND MURDER

State	Provocation Manslaughter	Murder
Alabama	2-20	10-99
Alaska	<20	20-99 (1st deg), 10-99 (2nd)
Arizona	3-12	25-Life (1st deg), 10-22 /16 (2nd)
Arkansas	3-20 (5-20 aggravated)	10-Life
California	3, 6, or 11	25-Life
Colorado	3-6 (5-12 aggravated)	Life
Connecticut	1-20, (5-20 aggravated), (5-40 with firearm)	25-Life
Delaware	2-25	Life (1st deg), 10-Life (2nd)
Florida	<15	Life
Georgia	<20	Life
Hawaii	<20	Life without parole (1st deg), Life with parole (2nd)
Idaho	<15	10-Life
Illinois	4-20 (called 2nd degree murder)	20-Life
Indiana	6-20 (20-50 with deadly weapon)	45-55, advisory 55, Life possible
State	Provocation Manslaughter	Murder
Iowa	10	Life (1st deg), 25-50 (2nd)
Kansas	7.5-8.5 (truth in sentencing guidelines)	Life (1st deg), 9-15 (2nd)

State	Provocation Manslaughter	Murder
Kentucky	10-20	Life
Louisiana	<40	Life without parole
Maine	<5 (<10 with firearm)	25-Life
Maryland	<20	Life (1st deg), 30 (2nd)
Massachusetts	<2.5 (<=Life with infernal weapon)	Life
Michigan	<15	Life
Minnesota	10	Life (1st deg), <40 (2nd), <25 (3rd)
Mississippi	2-20	Life
Missouri	5-15	10-Life
Montana	2-40	10-100
Nebraska	1-20	Life without parole (1st deg), Life with parole (2nd)
Nevada	1-10	20-Life (1st deg), 10-Life (2nd)
New Hampshire	<30	Life
New Jersey	5-10	30-Life
New Mexico	6	15-Life
New York	5-25	25-Life (1st deg), 15-Life (2nd)
North Carolina	3-9 (truth in sentencing guidelines)	10-Life
North Dakota	<20 (lower grade of murder)	30-Life
Ohio	3-10	15-Life
Oklahoma	>4	Life without parole (1st deg), 10-Life (2nd)
Oregon	<20	25-Life
Pennsylvania	<20	Life (1st & 2nd deg), <40 (3rd)
Rhode Island	<30	Life (1st deg), 10-Life (2nd)
South Carolina	2-30	30-Life

State	Provocation Manslaughter	Murder
South Dakota	<=Life	>=Life
Tennessee	3-15	Life (1st deg), 15-Life (2nd)
Texas	2-20 ("murder with mitigated punishment")	5-99
Utah	1-15	5-Life
Vermont	1-15	35-Life (1st deg), 20-Life (2nd)
Virginia	1-10	20-Life
Washington	<=Life	Life
West Virginia	1-10	Life (1st deg), 10-40 (2nd)
Wisconsin	<60	Life (1st deg), <60 (2nd)
Wyoming	<20	Life (1st deg), 20-Life (2nd)
